

Criteria for consideration of air transfer:

Logistics:

- Over bodies of water where road transfer is not available
- Road journey >3 hours on either leg, where air transfer would shorten this time

Acuity:

- Where an infant is not responding to local care and air transfer of the team to an infant, or an infant to specialist care, would be of benefit.

Repatriation:

- Repatriation when total mission time is more than 1 shift long, or needs more than 1 team
