11-13 September 2019, Newcastle

Why is ROP a hot topic for neonatal professionals?

*“Sight matters. If ROP screening and treatment does not go well babies are left severely sight impaired for the rest of their lives which has a hugely negative effect on quality of life, education and independence.”*

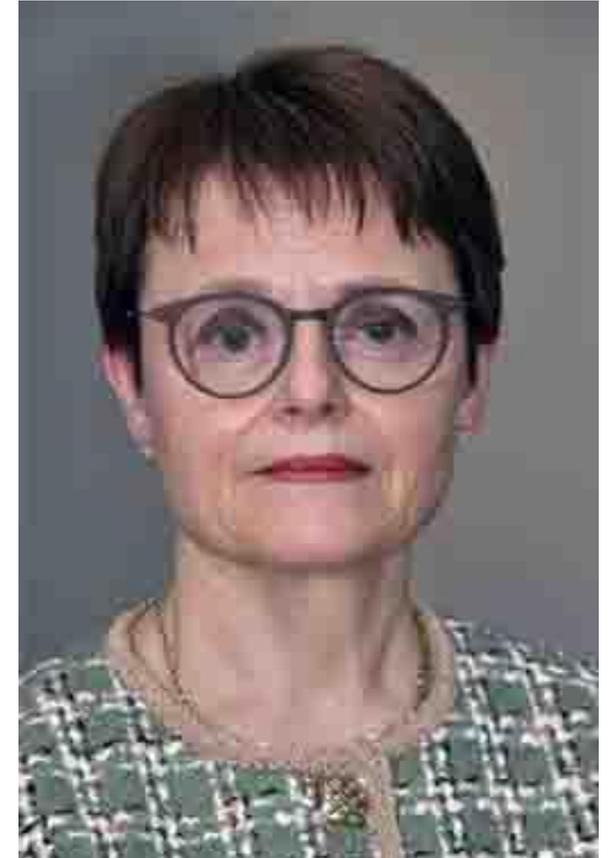

# Evidence and Excellence in Perinatal Care

11-13 September 2019, Newcastle

What do you see as being the greatest challenge for neonatal professionals over the next ten years? (And how can we best prepare for this?)

*“From the stand point of an ophthalmologist our greatest challenge is the increasing success of our neonatal colleagues in looking after ultra-premature babies. This leads to a significant increase in screening and treatment. Newer treatments such as anti VEGF may offer advantages but we need to know the long term outcomes.”*

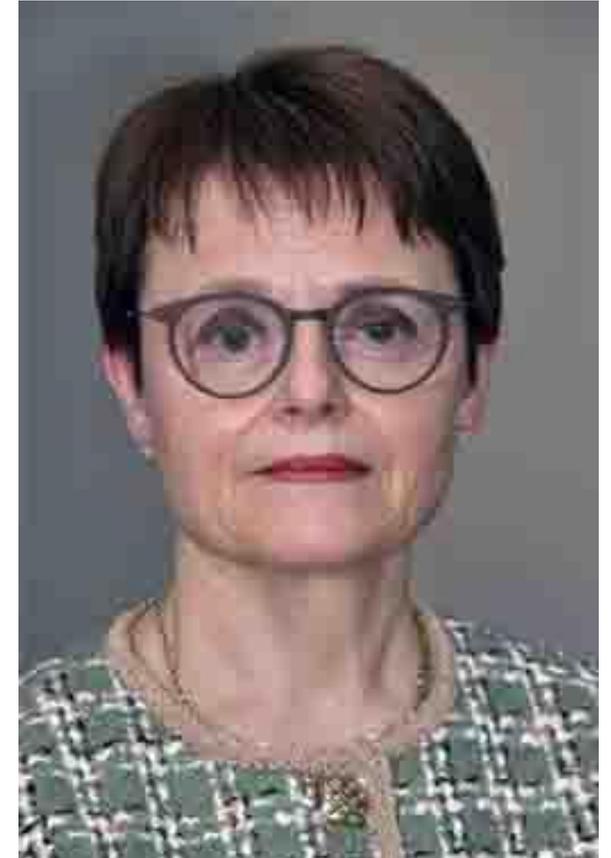

# Evidence and Excellence in Perinatal Care

How do you make the most of your time when attending conferences?

*“Take notes to make sure I can recall information. Talk to colleagues in the breaks: you learn a lot over coffee!”*

## Miss Gill Adams

Gill is a consultant at Moorfields Eye Hospital and is a subspecialist in strabismus and paediatric ophthalmology.

Gill has been a member of Royal College of Ophthalmologists working parties on child abuse and guidelines for ROP. Gill is the chair of the current Royal College of Ophthalmologists ROP treatment guideline development group. She is a council member and vice president of the International Strabismus Association. Gill is a member/mentor in the ROP-NET network to improve ROP screening in Commonwealth countries. Gill was the lead investigator in the national BOSU ROP treatment audit looking at ROP treatment, modalities and outcomes.
