SUMMARY OF STUDY			
SUMMARY OF STUDY	The study aims to determine which biological, environmental, social, psychological and psychosocial factors are associated with survival and optimal health and development of your children, as well as the causal relationships might vary with genetic composition. A medium-te aim is to follow the children into adulthood in order to answer questions about pre- and post-n factors associated, for instance, with schizophrenia, delinquency and reproductive failure, on one hand, and realisation of full educational potential, health and happiness, on the other. Longer term aims are to follow the parents into late middle age focussing in particular on obest markers of cardiovascular disease, emotional wellbeing, cognitive function, vision and hearing	erm atal the sity,	
MAIN TOPICS COVERED	Children; crime and justice; demography and migration; education and training; employment a		
	labour markets; ethnicity and national identity; income, wealth and spending; sex and gender; health and disability; household goods and technology; households and families; living conditions; young people		
START DATE	In pregnancy September 1990 - December 1992		
DATA COLLECTION DATES	Continuous		
REGIONS COVERED	Avon (Bristol and surrounding rural and urban areas		
UNITS STUDIED	Individuals, Families		
METHODS OF DATA	Data are collected using questionnaires, 3 per family per year and 2 per child per year. Childr	en	
COLLECTION	are examined annually. Teachers complete questionnaires on various school years. Medical		
	records are collected as appropriate. SATS results are also collected where permission is give	en.	
SAMPLE	Children born in Avon between 1991 and 1992 and their parents		
INITIAL SAMPLE SIZE	13,995 mothers; 14,120 children, 10,000 fathers		
ATTRITION / LATER SAMPLE	Data is collected continuously and respondents are approached repeatedly. Waves do not fall		
SIZES	within strict time periods, this is difficult to calculate. At least 80% give some information. The		
	average response rate to questionnaires sent to mothers as of December 1998 is 80.69%		
	(255,961 questionnaires returned out of 317,201 sent). The response rates from partners		
	averages 52.04% (61,359 out of 117,898). 80% giv	е

	www:, http://www.cls.ioe.ac.uk/
SUMMARY OF STUDY	The 1970 British Cohort Study (BCS70) is a continuing, multi-disciplinary longitudinal study which
	takes as its subjects all those living in Great Britain who were born in one week in 1970. (Subjects
	from Northern Ireland, who had been included in the birth survey, were dropped from the study in
	all subsequent sweeps). Since 1970 there have been six attempts to gather information from the
	full cohort.
MAIN TOPICS COVERED	With each successive attempt, the scope of enquiry has broadened from a strictly medical focus at
	birth, to encompass physical and educational development at the age of five, physical, educational
	and social development at the ages of ten and sixteen, and physical, educational, social and
CTART DATE	economic development at 26, 30 and 34 years.
START DATE	1970
DATA COLLECTION DATES	1970, 1970, 1980, 1986, 1991 (10% sample), 1996, 2000, 2004
REGIONS COVERED	England, Wales and Scotland
UNITS STUDIED	Individuals
METHODS OF DATA	Information has been collected from a number of different sources, and in a variety of ways. In the
COLLECTION	birth survey, information was collected by means of a questionnaire that was completed by the
	midwife present at the birth, and supplementary information was obtained from clinical records.
	The 5 and 10-year surveys were carried out by the Department of Child Health, Bristol University
	and the survey at these times was named the Child Health and Education Study (CHES). In 1975
	and 1980, parents of the cohort members were interviewed by Health Visitors, and information was
	gathered from head and class teachers (who completed questionnaires), the school health service
	(which carried out medical examinations on each child), and the subjects themselves (who
	undertook tests of ability). In both 1975 and 1980, the cohort was augmented by the addition of
	immigrants to Britain who were born in the target week in 1970. The 2000 survey made use of
	CAPI (Computer-assisted Personal Interviewing) and CASI (Computer-assisted Self Interviewing)
	for the first time.
SAMPLE / POPULATION	All babies born in one week in GB in 1970. In 1970, mothers of infants were recruited into the study
	by midwives. From 1970 through 1986, surviving cohort members were tracked through school
	records, the National Health Service Central Register, and media appeals. From 1996, cohort
	members have been traced through mailings, with the assistance of NHSCR, DVLA, MOD,
	National Insurance records, telephone directories and the electoral register. Addresses (excluding
	those for individuals known to have died or refused) were issued to survey interviewers who carried
	out further tracing, where needed. Birthday cards are now mailed to respondents to try to track
	recent location.
SAMPLING FRAME	Birth records of births in the UK 5-11 April 1970 maintained by health authorities.
TYPE OF SAMPLE	Whole universe
INITIAL SAMPLE SIZE	17,198
ATTRITION / LATER SAMPLE	
SIZES	The figure of 17,198 achieved at birth in 1970 was estimated to have included between 96% and
SIZES	98% of all births in England, Scotland, Wales and Northern Ireland in the survey week. Sample
	sizes at following data collection points: age 5, 13,135 (80%), age 10, 14,875 (93%), age 16,
	11,628 (72%), age 26, 9,003 (56%), age b30, 11,261 (70%), age 34, 9665. For a rigorous analysis
	of response rates, refer to the technical report (see
	http://www.cls.ioe.ac.uk/studies.asp?section=000100020002.
SOURCES OF FUNDING	Until recently, the resources needed to carry out each stage of the study have had to be separately
	negotiated. Those providing funds for the main follow-ups have included: Action Research for the
	Crippled Child; Allied Lyons; Basic Skills Agency; Beechams; Cancer Research Campaign;
	Channel 4; Daily Star; Department for Education and Employment; Department of Education and
	Science; Department of Health and Social Security; Department of Health and Social Security;
	Department of Health, Scottish Executive; Department of Social Security; Economic and Social
	Research Council; Economic and Social Research Council; Glaxo; Hayward Foundation; Home

	Trust; Leverhulme Trust; Manpower Services Commission; Marks and Spencer; Medical Research

	Settlement; US National Institute of Child Health and Development; Westland; WT Grant		
	Foundation; and other charities; public and private bodies and private donations. Fortunately, the		
	Economic and Social Research Council has recently provided the Centre for Longitudinal Studies		
	with funds to establish a resource centre which will provide a secure future for the study.		
MAIN PUBLICATIONS OF	Over the years, many hundreds publications, dealing with all aspects of life and development, have		
STUDY	come from the research based on the information gathered on the birth cohort. A limited number of		
	key publications are listed below. A comprehensive publication list is available from the address		
	given below.		
	Bynner, J., Ferri, E., and Shepherd, P. (eds) (1997) Twenty-something in the 90s: Getting on, Getting		
	by; Getting Nowhere. Aldershot: Dartmouth Press.

	1, The First Week of Life. Heinemann Medical Books		
	Chamberlain, R., Chamberlain, G., Howlett, B., and Masters, K. (1978) British Births 1970, volume 2,		
	Obstetric Care. Heinemann Medical Books		
	Ferri, E., Bynner, J. and Wadsworth M. (eds) (2003) Changing Britain, Changing Lives: Three		
	Generations at the end of the Century. London: Institute of Education Bedford Way Papers		
	Osborn, A. F., Butler, N. R., and Morris, A. C. (1984) The Social Life of Britain's Five-year-olds: A		
	report of the Child Health and Education Study. Routledge & Kegan Paul		
DATA ACCESS	Any researcher agreeing not to violate the confidentiality of the participants can access the data.		
	Some variables are anonymised to protect confidentiality. The data are available on CD both from		
	the UK Data Archive and University of Manchester Computing (MIMAS). Mimas also provides on-		
	line access to the data. On line documentation and documentation which can be downloaded from		
	the internet are available from the UK Data Archive, MIMAS, and the Centre for Longitudinal		
	Studies. A User Support Group open to all users has developed to promote use of the data and to		
	provide advice and guidance to users. The user group can also arrange access to non-		
	computerised and non-archived data in some cases. New and revised datasets are often made		
	available to users by the User Support Group before deposit with the UK Data Archive. Users must		
	sign an undertaking not to abuse the data before any form of access can be permitted.		

British Household Panel Survey (BHPS), including the Northern Ireland Household Panel Survey (NIHPS)

CONTACT PERSON /	Professor Nick Buck

	<u>bricj@essex.ac.uk</u>	
	http://www.iser.essex.ac.uk/ulsc/bhps/	
SUMMARY OF STUDY	The main objective of the survey is to further our understanding of social and economic change at	
	the individual and household level in Britain, to identify, model and forecast such changes, their	
	causes and consequences in relation to a range of socio-economic variables. The BHPS is	
	designed as a research resource for a wide range of social science disciplines and to support	
	interdisciplinary research in many areas. The BHPS also provides data from the UK for a number	
	of international harmonised data sets, including the Cross-national Equivalence Files, CHER, the	
	European Community Household Panel Survey (ECHP), EPAG, and PACO.	
MAIN TOPICS COVERED	Ageing and older people; children; crime and justice; demography and migration; education and	
	training; employment and labour markets; ethnicity and national identity; income, wealth and	
	spending; sex and gender; health and disability; household goods and technology; households and	
	families; housing; leisure; living conditions; social care and welfare; transport, travel, and tourism;	
OTART BATE	young people	
START DATE	1991	
DATA COLLECTION DATES	Annually	
REGIONS COVERED	England, Wales, Scotland, and from 2000, also Northern Ireland	
UNITS STUDIED	Individuals, Households	
METHODS OF DATA	Face to Face interviews with some telephone interviewing for waves 1-8; CAPI from Wave 9. A	
COLLECTION	household questionnaire is administered to the household reference person or spouse. An	
	individual schedule is administered to every adult member of the household i.e. aged 16 years on	
	or before December 1st of the survey year. A self-completion questionnaire is administered to	
	every adult completing an individual interview. Proxy schedules are administered to other members	
	of the household (preferably with spouse or adult child) to gain information on absent household	
	members or those who may be unable to take part e.g. illness/age. A telephone questionnaire is	
	used when all other efforts to achieve a face-to-face interview have failed. Youth interview for all	

SAMPLE / POPULATION	children aged 11 to 15 years in the household. Administered using a Walkman tape with pre- recorded questions and a self-completion booklet for the child to record their answers. Individuals - A face to face interview is conducted with all adults in the household aged 16 and over. They also undertake a self-completion questionnaire. A proxy schedule is used to collect information about absent household members. A telephone questionnaire is used as a final resort when all efforts to achieve a face to face interview have failed. Households - information is collected at the level of the household from the household reference person or spouse. The BHPS is an annual survey consisting of a nationally representative sample of about 5,500
	households recruited in 1991, containing a total of approximately 10,000 interviewed individuals. These same individuals are re-interviewed each successive year and, if they split-off from original households to form new households, they are followed and all adult members of these households are also interviewed. Similarly, new members joining sample households become eligible for interview and children are interviewed as they reach the age of 16. Since 1994, children aged 11-15 also complete a short interview. Extension samples of 1,500 households in each of Scotland and Wales were added to the main BHPS sample in 1999 to enable independent analysis of each country. In 2001 a sample of 2,000 households was added in Northern Ireland. The extension samples allow for country specific and comparative research within the UK.
SAMPLING FRAME	The sampling frame is the small users Postcode Address File (PAF) for Great Britain. Initial selection of households for inclusion in the panel survey was made using a two-stage clustered probability design and systematic sampling. In the first stage of selection, 250 postcode sectors were selected as the primary sampling units from an implicitly stratified listing of all sectors on the PAF using a systematic sampling method. In the second stage of selection, delivery points, which are approximately equivalent to addresses, were sampled from each selected probability sampling unit using an analogous systematic procedure. The sample for Wave 2 and beyond consists of all eligible adults in all households where at least one interview was obtained in Wave One, regardless of whether that individual had been interviewed in Wave One. The sample for each wave thus consists of all adult Original Sample Members (OSMs) plus their natural descendants plus other adult members of their households, known as Temporary Sample Members. New eligibility for sample inclusion between waves is; 1. A baby born to an OSM. 2. An OSM move into a household with one or more new people. 3. One or more new people move in with an OSM. Also subsets of temporary sample members become permanent sample members, and are followed even if they no longer reside with an original sample member. The criterion for this status is that the TSM is the parent, with an OSM of a new OSM birth. Similar procedures were used to collect over samples in Wales, Scotland and Northern Ireland.
TYPE OF SAMPLE	The sample is a stratified clustered design drawn from the Postcode Address File and all residents present at those addresses at the first wave of the survey were designated as panel members.
INITIAL SAMPLE SIZE	Wave 1 - 5538 households and 10264 individuals; Wave 2 - 5227 households and 9845 individuals; Wave 3 - 5228 households and 9600 individuals; Wave 4 - 5125 households and 9481 individuals; Wave 5 - 5034 households and 9249 individuals; Wave 6 - 5066 households and 9438 individuals; Wave 7 - 5027 households and 11193 individuals; Wave 8 - 5007 households and 10906 individuals; Wave 9 - 4974 households and 15625 individuals (at Wave 9 there are extra samples in Scotland (1459 households) and Wales (1428 households) to study the effects of devolution); Wave 10 - 8762 households and 15605 individuals; Wave 11 - 10632 households and 18869 individuals; Wave 12 - 9353 households and 16599 individuals.
ATTRITION / LATER SAMPLE SIZES	Re-interview rates Wave 1-2: 87.4%; Waves 2-3: 88.7%; Waves 3-4: 90.7%; Wave 4-5: 95.1%; Waves 5-6: 93.1%; Waves 6-7: 92.5%; Waves 7-8: 92.2%; Waves 8-9: 92.6%; Waves 9-10: 92.5%; Waves 10-11: 92.3%; Waves 11-12: 81.5%.

SUMMARY OF STUDY	The MRC Cognitive Function and Ageing Study is a n		
	programme of health and frailty in ageing populations. The main aims of the multicentre study are		
	to estimate the prevalence and incidence of cognitive		
	variation of those two measures throughout England and Wales. In addition the study aims to		
	determine the natural history of dementia, in particula		
	including the distribution of the interval between the ic		
	death, and evaluate the degree of disability associate		
	needs this disability generates. Shortly after the study		
	for a neuropathologists' consortium to examine the ne		
	Genetic research was also not part of the initial fundir		
	population based DNA resource has been incorporate		
	genes which influence risks for four related clinical pa		
	mixed dementia, dementia of all types, cognitive decline over a 5 year period.		
MAIN TOPICS COVERED	Heath, healthy lifestyle activity, dementia, cognitive decline, genetics DNA, neuropathology		
START DATE	1991		
DATA COLLECTION DATES	1992, 1993, 1994, 1996, 1999, 2000, 2002		
REGIONS COVERED	The sample included only those individuals living within a specific geographic location. In		
	Cambridgeshire this included the rural area of Ely city and surrounding villages. Liverpool included		
	an urban sample from the city of Liverpool based on postal districts L1-L19, L24, L25-27, and drew		
	a rural sample from specific rural areas (Ynys Mon and Dwyfor) in Gwynedd north Wales.		
	Newcastle sampled all postcodes north of the river and within the city boundary. Nottingham was		
	sampled from the entire city excluding four wards that were used in a previous survey. In Oxford		
	the sample was drawn from the city on postcodes 1-4.		
UNITS STUDIED	Individuals		
METHODS OF DATA	The initial screening interview was conducted in the respondent's place of residence, using		
COLLECTION	portable computers with software customised centrally by the MRC Biostatistics Unit. Interviews		
	lasted for between 30 and 45 minutes, but would be n		
	or demented or too frail to answer the complete set. T		
	also conducted using portable computers customised		
	interviews were conducted by interviewers other than		
	recruited and trained for the purpose. Interviewers did not know the outcome of the first interview.		
	The interviews lasted from 45 to 90 minutes. The annual interview consisted of a combined screen		
	and assessment, where information on changes since		
	assessment and biannual follow up interview permission was sought to approach and interview a		
	relative or carer to ask for an objective account of the respondent's health and abilities. Six years		
	after the initial screening interview, all respondents in the assessed groups were re-interviewed		
	using the <u>combined screen and assessment interview</u> and at the end of that interview signed		
	permission was requested to take a sample of blood or saliva. Permission was also sought to		
	access GP and hospital notes. All respondents who were selected to be assessed were eligible for		
	approach for a declaration of intent to donate brain tissue at post mortem (DOI). If a DOI is signed,		
	more than one relative's name should be obtained as next of kin. A thank you letter is sent and a		
	donor card is given, with a suggestion that it be placed with legal papers which would be accessed		
	in the event of death. Confidentiality is stressed - only GPs and hospitals will be informed.		
SAMPLE / POPULATION	Adults aged 65 and over in 1990		
SAMPLING FRAME	Family Health Service Authority (FHSA) lists were use		
	defined a precise geographic area, and the study pop		
	resident within it. Problems of inaccuracy, patients wh		
	FHSA list, were resolved by asking GP surgeries to cl		
	unable to update the sampling list, the original list was		
TYPE OF SAMPLE	Random sample of 65 year-olds in four urban and two		
		·	

	stratified to have equal numbers in 65-74 and 75+ age ranges.	
INITIAL SAMPLE SIZE	13,004 were initially interviewed. The basic study plan was to examine twice the cognitive function	
	of a population of individuals aged 65 years and over, with an interval of two years between the	
	two examinations. One month after the initial interview a 20% sub-sample was assessed and	
	followed up on an annual or biannual basis. At the two year follow up of the 80% not assessed at	
	first interview, a further 20% sub-sample was assessed one month later and again followed up on	
	an annual or biannual basis.	
ATTRITION / LATER SAMPLE	An accurate audit trail of participants throughout the study has been created. See the website	
SIZES	(http://www-cfas.medschl.cam.ac.uk/data and analysis.htm#v7.0)

STUDY		
DATA ACCESS	The CFAS data archive is held at the MRC Biostatistics Unit in Cambridge. All data released for	
	analysis use are stored in an anonymous data archive. The CFAS data archive provides data to	
	collaborators via the Co-operative Management Committee (CMC) of MRC CFAS. Individual	
	researchers wanting access to the data can either directly access the core group through the	
	Cambridge Administrator or approach the member of CMC who facilitates research in their area.	
	Proposals for access to the biological resources are controlled via the Tissue Request Form.	
	Potential researchers should note that these proposals are put before the Cooperative	
	Management Committee (CMC), (independent of the study). Sensitive proposals will go before a	
	sub-set of researchers as needed. Currently no linked data between the biological resource and	
	the respondent data are released for general use. Blinding of data is undertaken at the CFAS	
	Data Archive. Analysis of the linked data is undertaken at the MRC Biostatistics Unit, where	
	facilities exist for visiting workers. Proposals to access the tissue should therefore either provide	
	funds for analysis or for workers to visit Cambridge.

	http://www.ifs.org.uk/elsa/index.htm	
SUMMARY OF STUDY	ELSA investigates the economic position, health and quality of life of older people in England. The	
	study both seeks to influence policy as well as to explain how people's expectations and plans for	
	their retirement are changing.	
MAIN TOPICS COVERED	Ageing and older people; demography and migration; education and training; employment and	
	labour markets; ethnicity and national identity; income, wealth and spending; sex and gender;	
	health and disability; household goods and technology; households and families; housing; leisure;	
	living conditions; social care and welfare	
START DATE	April to September 2002	
DATA COLLECTION DATES	Every two years	
REGIONS COVERED	England	
UNITS STUDIED	Individuals, Families, Households	
METHODS OF DATA	Questionnaire. Interviews conducted face to face (CAPI initially); but from the second wave, a	
COLLECTION	nurse will also visit respondents to collect clinical samples	
SAMPLE	The population of England aged 50+ living in private households	
INITIAL SAMPLE SIZE	12,100 people	
ATTRITION / LATER SAMPLE	70% of households responded; 96% of eligible individuals within responding households	
SIZES	participated	
SOURCES OF FUNDING	The US National Institute on Aging has provided the main funding for the first five year cycle of the	
	study. Funding from the UK has been provided by the Department of Health, Department for Work	
	and Pensions, Department of Transport, Local Government and the Regions, Department for	
	Education and Skills, Department for Culture, Media and Sport, HM Treasury, and the Office for	
	National Statistics, and the Department for the Environment, Food, and Rural Affairs.

SUMMARY OF STUDY	Growing Up in Scotland (GUS) is a large-scale lor	ngitudinal social survey designed to examine the
SUMMANT OF STUDY	characteristics, circumstances and behaviours of	
	possibly beyond). It will form a central part of the S	
	monitoring and evaluation of its policies for childre	
	primary objective of the survey is to address a sign	
	policy monitoring and evaluation. It will collect info	
	and their families from birth to age 5 and provide t	
	adolescence. The data will also serve wider policy	
	analysis of issues affecting children and young pe	ople.
MAIN TOPICS COVERED	Pregnancy and birth, Childcare and issues relating	
	Child health and development, Parental health, Access to, awareness of and use of services	
START DATE	2005 (fieldwork from April 2005 – Jan 2006)	
DATA COLLECTION DATES	Annually to age 5, less frequent after that until teenage years	
REGIONS COVERED	Scotland. The study has a national sample, which is large enough to support detailed analysis by	
	key sub-groups, but does not allow analysis by highly local geographic areas.	
UNITS STUDIED	Individuals	
METHODS OF DATA	Initially, face-to-face CAPI interviews are being conducted with main carers in their own homes,	
COLLECTION	but as the cohort ages, these are likely to be supplemented (and eventually replaced) by	
	interviews with the children themselves. Subseque	ent sweeps will also involve data collection from
	partners. The interview is quantitative and consists	s almost entirely of closed questions that are
	interviewer-administered, though a subset uses self-completion methods (CASI).	
SAMPLE / POPULATION	There are two cohorts for the study, both being recruited and interviewed during the period March	
	2005 to January 2006. The first consists of 5,000 c	
	the period May 2004-February 2005. The second consists of 3,000 children born in the period May	
	2002-February 2003. Each of these cohorts will be	
SAMPLING FRAME	The sample is drawn from Child Benefit Records (
	Pensions on behalf of the Inland Revenue.	,, , , , , , , , , , , , , , , , , , ,
TYPE OF SAMPLE	Interviewing is clustered in particular geographic a	reas (known as Primary Sampling Units or
	PSUs). These are based on aggregations of Data	
	increasingly being used as the basis of neighbourh	hood statistics in Scotland). These were
	randomly selected within a stratification scheme b

	http://www.st-andrews.ac.uk/gg/Research/PopHealth/long.shtml	
SUMMARY OF STUDY	Scotland was originally included in the Longitudinal Study collected by the UK Office for National	
	Statistics based initially on a sample drawn from the 1971 UK census. Funding for the Scottish	
	element of the LS was withdrawn and the original data was lost. The Scottish Longitudinal Study	
	(SLS), now under construction, will reintroduce the possibility for health research based on this	

form of longitudinal data for Scotland. Like the Longitudinal Study for England and Wales, which	
has been running for 30 years, the SLS will link Census, vital statistics and cancer records for a	
sample of the Scottish population. The data allow analysis of occupational mortality, employment	
status and mortality, economic status and cancer registrations, socio-economic factors associated	
with teenage pregnancy, survival analysis of cancer by area deprivation, inequalities in health,	
patterns of retirement migration, the effects of divorce and remarriage on housing tenure, links	
between social and geographical mobility, the effects of the ageing population, the patterns of	
employment of men and women through the life course, changes in birth spacing, associations	
between fertility and cancer survival, the prevalence of different cancers, and related issues for	
Scotland.	
Ageing and older people; children; demography and migration; employment and labour markets;	
sex and gender; health and disability; young people	
1991	
The census data is collected every 10 years; most medical data is collected continuously. The	
data were assembled into the SLS in one multi-year operation	
Scotland	
Individuals	
Administrative records, Linked sources, Aggregated administrative data	
Residents of Scotland: all people born on 20 random birthdays are included (these 20 dates of	
birth include the 4 dates covered in the LS of England and Wales)	
A 5.5% sample drawn from the 1991 and 2001 Census and records of inter-censal births and	
immigrants	
Random sample	
The study will cover approximately 257,000 sample members and an additional around 385,000	
people living in the households of the originally sampled people	
Not yet known	
Chief Scientist Office, Scottish Higher Education Funding Council	
n/a	
The data are being developed for academic researchers, social policy analysts and government	
departments. Data will be released as tabulations, statistical summaries or aggregated data only,	
initially in document form, but if future funds are found, a web-based system creating customised	
information may be developed. Researchers will not receive individual-level SLS data directly, but	
it may be possible for researchers to pay the study team to conduct individual-level analysis and	
then release aggregated results.	

Longitudinal Study of Young People in England (LSYPE)

Longitudinal Study of Tourig Feople in England (LSTFL)

	email <u>iain.noble@dfes.gsi.gov.uk</u> .	
SUMMARY OF STUDY	This dataset will follow young people in the UK ag	e 14-25. The interviews cover many different
	topics. For young people we would like to ask about things such as: what they think about their	
	school, what they do there, what they see themselves doing in a few years' time and how they like	
	to spend their free time outside school. Among the topics for parents are: their involvement in their	
	son's or daughter's education; their views on their school and on education in general; what they	
	would like their child to do when they reach 16; thing	
	information, for statistical purposes, about what wan	
	now. We also need to ask a few questions about thin	
	work in the time since their son or daughter was born	
MAIN TOPICS COVERED	Education and training; sex and gender; young people	
START DATE	2004	
REGIONS COVERED	National sample	
UNITS STUDIED	Individuals	
METHODS OF DATA	The first part of the study involves an interview at home with the young person sampled. We would	
COLLECTION	also like to talk to the parent who is most involved w	th their education – this might be their mother
	or father – it's up to you to decide who this should be. There will also be a short interview with any	
	other parent or guardian in the household. The parents can, of course, decide to be there for both	
	interviews if they wish and do them together.	

SAMPLE / POPULATION	A sample of schools was selected at random from all those in England with Year 9 pupils in
	January 2004. A sample of around 21,000 pupils was then picked, again at random, from all the
	pupils in Year 9 at those schools.
SAMPLING FRAME	2003 Pupil Census.
TYPE OF SAMPLE	Random sample
INITIAL SAMPLE SIZE	21,000

The study aims to provide information and understanding of the social conditions surrounding birth and early childhood, increasingly appreciated as fundamental to the study of the whole of the life course. This applies across the range, from the origins of social exclusion through investigation of the influence of early circumstances on health over the file course to providing evidence for major policy initiatives such as "Sure Start". The information gathered on health, education, family, employment etc are put together by scientists and policy makers to understand and improve life in the UK today and in the future. Maior questions about the prospects for children born in 2000-1 concern poverty and wealth, the quality of family life and its support by public policy and the broader community. The health and wellbeing of parents and infants will be located in the context of the rich socio-economic data to be collected in the study. Issues to emerge for future sweeps of the cohort will include: advantage and disadvantage in education, health, employment and the parenting of individualism. These will make the unfolding lives of the new cohort different from those of their predecessors. START DATE 2001 DATA COLLECTION DATES 2001, 2003, 2006 REGIONS COVERED Individuals Individuals Interviews in 2001 were carried out with both mothers and (where resident) fathers or father figures. A structured interview will be conducted with each parent by Computer Assisted Personal Interview (CAPI). A Computer Aided Self-completion Interview (CASI) will also be administered. The sample population of 23,000 was drawn from all live births in the Vicever a 12 month period, beginning 1 September 2000 in England and Wales, and 1 December 2000 in Scotland and N

The study aims to provide information and understanding of the social conditions surrounding birth and early childhood, increasingly appreciated as fundamental to the study of the whole of the life course. This applies across the range, from the origins of social exclusion through investigation of the influence of early circumstances on health over the life course to providing evidence for major policy initiatives such as "Sure Start". The information gathered on health, education, family, employment etc are put together by scientists and policy makers to understand and improve life in the Uk today and in the future. MAIN TOPICS COVERED Major questions about the prospects for children born in 2000-1 concern poverty and wealth, the quality of family life and its support by public policy and the broader community. The health and wellbeing of parents and infants will be located in the context of the rich socio-economic data to be collected in the study. Issues to emerge for future sweeps of the cohort will include: advantage and disadvantage in education, health, employment and the parenting of the next generation. Besides changing family forms, there are social and economic changes in the labour market, technology, social polarization, gender roles, and the ideology of individualism. These will make the unfolding lives of the new cohort different from those of their predecessors. START DATE DATA COLLECTION DATES SERGIONS COVERED Interview in 2001 were carried out with both mothers and (where resident) fathers or father figures. A structured interview will be conducted with each parent by Computer Assisted Personal Interview (CAPI). A Computer Aided Self-completion Interview (CAS) will also be administered. SAMPLE / POPULATION The sample population of 23,000 was drawn

DATA ACCESS	Multi-purpose, multi-disciplinary datasets are available to the research community via the ESRC Data Archive. MCS data can be accessed by registering with the UK Data Archive, which is administered by the Economic and Social Data Service (ESDS) at the University of Essex. You can then download data in a variety of formats, together with all necessary documentation, or order delivery of a CD-ROM.

SUMMARY OF STUDY	The 1958 National Child Development Study (NCDS) is a continuing, multi-disciplinary longitudinal
	study which takes as its subjects all those living in Great Britain who were born in one week in
	1958. Since 1958 there have been seven attempts to gather information from the full cohort.
MAIN TOPICS COVERED	With each successive attempt, the scope of enquiry has broadened from a strictly medical focus at
	birth, to encompass physical, educational and social development at the age of seven, eleven and
	sixteen, and physical, educational, social and economic development at 23, 33, 42 and 46 years.
	A comprehensive medical follow up was additionally carried out at age 44.
START DATE	1958
DATA COLLECTION DATES	1958, 1965, 1969, 1974, 1978 (exam data), 1981, 1991, 1995 (10% sample), 1999/2000, 2002
	(medical), 2004
REGIONS COVERED	England, Wales and Scotland
UNITS STUDIED	Individuals
METHODS OF DATA	Information has been collected from a number of different sources, and in a variety of ways. For
COLLECTION	the birth survey information was obtained from the mother and from medical records by the
	midwife. For the purposes of the first three NCDS surveys, information was obtained from parents
	(who were interviewed by health visitors), head teachers and class teachers (who completed
	questionnaires), the schools health service (who carried out medical examinations) and the
	subjects themselves (who completed tests of ability and, latterly, questionnaires). During the
	collection of exam data in 1978 information was obtained only from the schools and colleges by
	postal survey. The 1981 survey differs in that information was obtained from the subject by
	professional survey research interviewer, and from the 1971 and 1981 Censuses - from which
	variables describing area of residence were taken. Similarly, the 1991 survey also relied on
	survey research interviewers to collect information from cohort members. Self-completion
	questionnaires were also used to gather data from NCDS subjects and from husbands, wives, and
	cohabitees. In addition, for a random sample of one in three cohort members, information was
	collected for all natural or adopted children who were living with them. Data were gathered from
	the children themselves, and from their mother, or mother-figure (who might be the cohort
	member, or their spouse or partner), using a series of age-specific assessments of cognitive and
	behavioural development. These were supplemented by a mother interview, and by interviewer
	observations of mother-child interaction. For the 1999/2000 survey, information was gathered
	from cohort members by interview and by self-completion. CAPI (Computer-assisted Personal
	from cohort members by interview and by self-completion. CAPI (Computer-assisted Personal Interviewing) and CASI (Computer-assisted Self Interviewing) were used for the first time. the

	 Thirty-three-year follow-up, 1991: Economic and Social Research Council; Department of Health; Department of Social Security Employment Department; Department of Education and Science; Department of the Environment; Transport and Road Research Laboratory; Health and Safety Executive; and US National Institute of Child Health and Development. Forty-one/two year follow-up, 1999/2000: Economic and Social Research Council. Forty-four year Medical follow up, 2002: Medical Research Council.
	Forty-six year follow up, 2004: Economic and Social Research Council.
MAIN PUBLICATIONS OF STUDY	Over the years, many publications, dealing with all aspects of life and development, have come from the research based on the information gathered on the birth cohort. A limited number of key publications are listed below. A comprehensive publication list is available from the addresses given below.
	Butler, N. R., and Bonham, D. G. (1963) Perinatal Mortality. Edinburgh: E & S Livingstone
	Butler, N. R., and Alberman, E. D. (1969) Perinatal Problems. Edinburgh: E & S Livingstone
	Davie, R., Butler, N. R., and Goldstein, H. (1972) From Birth to Seven. London: Longman.
	Fogelman, K. (1976) Britain's Sixteen-Year-Olds. London: National Children's Bureau
	Fogelman, K. (Ed) (1983) Growing Up in Great Britain: collected papers from the National Child
	Development Study. London: Macmillan
	Ferri, E. (Ed) (1993) Life at 33: the fifth follow-up of the National Child Development Study. London: National Children's Bureau, City University, Economic and Social Research Council.
	CHANGING LIVES PUB
	Ferri, E., Bynner, J. and Wadsworth M. (eds) (2003) Changing Britain, Changing Lives: Three Generations at the end of the Century. London: Institute of Education Bedford Way Papers
DATA ACCESS	Any researcher agreeing not to violate the confidentiality of the participants can access the data.
	Some variables are anonymised to protect confidentiality. The data are available on CD both from
	the UK Data Archive and University of Manchester Computing (MIMAS). Mimas also provides on-
	line access to the data. On line documentation and documentation which can be downloaded from
	the internet are available from the UK Data Archive, MIMAS, and the Centre for Longitudinal
	Studies. A User Support Group open to all users has developed to promote use of the data and to
	provide advice and guidance to users. The user group can also arrange access to non-
	computerised and non-archived data in some cases. New and revised datasets are often made
	available to users by the User Support Group before deposit with the UK Data Archive. Users must
	sign an undertaking not to abuse the data before any form of access can be permitted.

The MRC National Survey of Health and Development (NSHD). The British 1946 birth cohort study

	http://www.nshd.mrc.ac.uk
SUMMARY OF STUDY	The NSHD is a prospective, longitudinal birth cohort study, and one of the longest running large-scale studies of human development in the world. Its aim is to map biological and social pathways to health and disease, from early life to ageing. The study began in 1946 as an investigation of maternity and birth circumstances. The project has since evolved into a study of physical and mental health in age. Physical health of children has been measured through growth, illness and disability; and for adults in terms of blood pressure, respiratory function, disability, balance, grip strength, body mass index, waist/hip ratio), menopausal transition, and illness. Mental health has been measured in terms of behaviour in childhood and adolescence (based on the reports of mothers and teachers). For adults, mental health is assessed using measures of anxiety and depression. Cognitive function was measured at the ages 8, 11, 15, 26, 43 and 53 years. Information has been collected by health visitors, from mothers, and from medical records, school nurses, teachers, interviewers, research nurses and postal contacts.
MAIN TOPICS COVERED	Ageing and older people; children; crime and justice; demography and migration; education and

	training; employment and labour markets; income, wealth and spending; sex and gender; health and disability; households and families; <i>leisure</i> ; young people
START DATE	1946
DATA COLLECTION DATES	Data collections were undertaken 10 times in the preschool and school years, and 10 times in
	adulthood. Data was collected annually on women's health from ages 47 to 55 years and on first
	born children at ages 4 and 8 years.
REGIONS COVERED	England, Wales and Scotland
UNITS STUDIED	Individuals
METHODS OF DATA	Respondents self-completed questionnaires, and also were interviewed by the research team.
COLLECTION	Health and educational professionals also provided details on sample members, and nurses
	collected physical measures.
SAMPLE / POPULATION	The sample was taken from all the single born, legitimate births occurring in England, Wales and
	Scotland in the week 3-9 March 1946. The study selected a random of 1 in 4 children whose
	mothers were wives of manual workers, and all children whose mothers were wives of non-manual
	or agricultural workers.
SAMPLING FRAME	Birth records
TYPE OF SAMPLE	Disproportionate random sample
INITIAL SAMPLE SIZE	5,362
ATTRITION / LATER SAMPLE	Birth (1946) 100%; wave 2 (age 2, 1948) 94%; wave 3 (age 4, 1950) 96%; wave 4 (age 6, 1952)
SIZES	95%; wave 5 (age 7, 1953) 93%; wave 6 (age 8, 1954) 92%; wave 7 (age 9, 1955) 87%; wave 8
	(age 10, 1956) 85%; wave 9 (age 11, 1957) 89%; wave 10 (age 13, 1959) 86%; wave 11 (age 15,
	1961) 89%; wave 12 (age 19, 1965) 75%; wave 13 (age 20, 1966) 83%; wave 14 (age 22, 1968)
	84%; wave 15 (age 23, 1969) 67%; wave 16 (age 25, 1971) 74%; wave 17 (age 26, 1972) 85%;
	wave 18 (age 31, 1977) 78%; wave 19 (age 36, 1982) 86%; wave 20 (age 43, 1989) 85%; wave
	21 (age 53, 1999) 88%
SOURCES OF FUNDING	Chiefly Medical Research Council, but currently also grants from National Institutes of Ageing via
MAIN BURLICATIONS OF	RAND, and the European Commission Biomed Programme
MAIN PUBLICATIONS OF STUDY	A history of the study in its social context up to 1990 is given in <i>The Imprint of Time</i> (Wadsworth
31001	MEJ, Oxford University Press, 1991). A summary of findings from the study up to 1997 can be
	found in Wadsworth MEJ and Kuh DJ. Childhood influences on adult health. <i>Paediatric and Perinatal Epidemiology</i> , 1997, 11, 2-20. References to recent findings are shown under <i>Current</i>
	and recent research at http://www.nshd.mrc.ac.uk/. Also see

DATA ACCESS	Limited access is available to researchers working on similar scientific projects. Prospective users
	should apply to the data collectors with a proposal for the use of the data.

Newham Household Panel Study - Living in Newham (NHPS)

		-,
CONTACT PERSON /	Dhanwant Rai	Heather Laurie (Dr.)
DETAILS	London Borough of Newham	Institute for Social and Economic Research
	Newham Town Hall	University of Essex
	Barking Road	Wivenhoe Park
	East Ham	Colchester CO4 3SQ
	London E6 2RP United Kingdom	Phone +44 1206 873556
	Phone +44 (0)20 8430 2000	Fax +44 1206 873151

	Fax +44 (0)20 8430 2522 laurh@essex.ac.uk	
	dhanwant.rai@newham.gov.uk http://www.iser.essex.ac.uk/	
	http://www.newham.gov.uk	
SUMMARY OF STUDY	This study will aid the London Borough of Newham (LBN) to make effective policies. The Borou	.gh
	of Newham has a diverse population with relatively high rates of disadvantage. The study	_
	specifically aims to assist with regeneration initiatives and measures to reduce deprivation (sucl	h
	as increasing skills and employment opportunities).	
MAIN TOPICS COVERED	Ageing and older people; children; demography and migration; education and training;	
	employment and labour markets; ethnicity and national identity; income, wealth and spending; s	sex
	and gender; health and disability; household goods and technology; households and families;	
	housing; leisure; living conditions; social care and welfare; transport, travel, and tourism; young	
	people	
START DATE	June to September 2002	
DATA COLLECTION DATES	Annually: June to September 2003	
REGIONS COVERED	Newham (London borough)	
UNITS STUDIED	Individuals, Families, Households	
METHODS OF DATA	This study collected data through face to face interviews, and respondents received a £5 vouch	er
COLLECTION	in exchange for their participation in the study. The study team translated questionnaires and	
	showcards into the six most common languages after English used in Newham, and interviewer	
	able to speak these languages have worked with the survey. All questionnaires are derived from	n
	the British Household Panel Study and follow the same format. A proxy questionnaire collects	
	minimal data on absent or consenting but non-responding household members.	
SAMPLE	People aged 16+ living in private households in the London Borough of Newham	
INITIAL SAMPLE SIZE	1680 addresses were sampled, and 1052 households were interviewed, and 1733 of the 2158	
	eligible individuals completed the first wave interview.	
ATTRITION / LATER SAMPLE	65% of sampled households participated; 80% of enumerated eligible individuals completed the	;
SIZES	person questionnaire.	
SOURCES OF FUNDING	The London Borough of Newham funds the training and recruitment of interviewers directly	
	although the recruitment is to be undertaken by ISER staff. The pretest and main fieldwork stag	es
	are to be conducted by ISER and funded by LBN on a contract basis.	
MAIN PUBLICATIONS OF	None yet	
STUDY		
DATA ACCESS	The London Borough of Newham will control all access to the data resulting from the NHPS.	
	Substantive research will be conducted by ISER staff alone and in conjunction with researchers	;
	from the LBN. At this time, criteria for access have not been devised.	

Scottish School Leavers Survey

CONTACT PERSON / DETAILS	John Tibbitt
	Central Research Unit
	Scottish Executive
	Tel: 0141 242 0260
	E-mail: john.tibbit@scotland.gsi.gov.uk
	http://www.statistics.gov.uk/STATBASE/Source.asp?vlnk=1323&More=Y
SUMMARY OF STUDY	This cohort study tracks the experiences associated with different educational outcomes.
	This is a cohort study of school pupils in the fourth year of secondary education (age 16).
	The Students have been asked about perceptions of school, reasons for staying in
	education or leaving school, help with decision making, employment and training activity,
	job satisfaction, socio-economic and family background, facilities available at home and
	parental support, future plans.
MAIN TOPICS COVERED	Demography and migration; education and training; employment and labour markets;
	ethnicity and national identity; income, wealth and spending; sex and gender; health and
	disability; household goods and technology; households and families; housing; leisure; living
	conditions; social care and welfare; young people
START DATE	Scottish Executive has sponsored surveys of school leavers and young people since the
	early 1970s. These include the first incarnation of the Scottish School-Leavers Survey
	(SLSS) which, in the mid-1980s, was subsumed within the broader <i>Scottish Young People's</i>
	Survey (SYPS). Following a review in 1991 of the use made of the findings by the Scottish
	Executive Education and Industry Department (SEEID), the survey was redesigned and
	resumed the title of the Scottish School-Leavers Survey. A further review in 1996 led to the
	establishment of the current design, which involves sampling cohorts of young people in
	fourth year and then collecting data from them on four occasions, at the ages of 16-17, 18-
	19, 21-22 and 23-24 years
DATA COLLECTION DATES	Often annually, but regularly there are years where data is not collected
REGIONS COVERED	National

UNITS STUDIED	Individuals
METHODS OF DATA	Data are collected by postal and self-completion questionnaire
COLLECTION	
SAMPLE	Students aged 16 in Scotland, with the aim of following them up at ages 18-19, 21-22 and
	23-24.
SAMPLING FRAME	School records, Education Statistics Division returns on school leavers
TYPE OF SAMPLE	One-stage stratified or systematic random sample
INITIAL SAMPLE SIZE	In 1991-92, 3,734 students interviewed; in 1992-93, 3,469 students interviewed; in 1993-94,
	3,223 students interviewed. In 1995, 2,912 18 and 19 year-olds were re-contacted. The
	sample for the 1999 follow-up survey included all those who had responded to the 1995
	follow-up survey. The 2001 sweep obtained data from 5003 students, and the latest 2003
	sweep (cohort 4, sweep 1) obtained interviews from 5088 people.
ATTRITION / LATER SAMPLE	1991-92 the response rate was 70% (74% excluding those from whom it was known a
SIZES	response could not be obtained e.g. Post Office returns); in 1992-93 73% (76%); in 1993-94
	66% (70%); in 1995 (the 18-19 follow-up) 56% (62%); in 1996-97 72%. There is significant
	variation in non-response by the level of qualification achieved, stage of leaving, type of
	schools attended, region and gender.

	+ 44 141 357 3949
	Patwest@msoc.mrc.gla.ac.uk
	http://www.msoc-mrc.gla.ac.uk/
SUMMARY OF STUDY	This study is a school-based survey of 2,500 young people who were first surveyed at the
	age of 11 (final year of primary school), and followed up at ages 13 (second year of
	secondary school) and 15 (last year of compulsory education) to investigate social aspects
	of health and health behaviours in adolescence.
MAIN TOPICS COVERED	Children; crime and justice; demography and migration; education and training; ethnicity
	and national identity; income, wealth and spending; sex and gender; health and disability;
	households and families; leisure; living conditions; young people
START DATE	School year 1994 - 1995
DATA COLLECTION DATES	Biennially, two follow ups: school year 1996-7, school year 1998-9
REGIONS COVERED	Central Clydeside Conurbation (that is, in and around Glasgow)
UNITS STUDIED	Schools, Individuals
METHODS OF DATA	Most data were collected with self-complete questionnaires, though brief interviews and
COLLECTION	physical measures were obtained during classroom sessions at each age. Additional data
	was collected through self-completion questionnaires given to parents and teachers of the
	children at the age 11 sweep of collection. The age 15 data were collected via a computer-
	administered psychiatric interview (the Voice-DISC).
SAMPLE / POPULATION	Final year primary school children (1994-5 academic year)
SAMPLING FRAME	Schools within the Central Clydeside Conurbation, stratified on the basis of geographical
	location, denomination and deprivation
TYPE OF SAMPLE	Stratified sample

INITIAL SAMPLE SIZE	1994-5 (baseline): issued sample = 2793; achieved sample = 2586. 93% of target children
ATTRITION /	1996-7: achieved sample = 2371 (92% of baseline, 85% of issued)
LATER SAMPLE SIZES	1998-9: achieved sample = 2196 (85% of baseline, 79% of issued)
SOURCES OF FUNDING	Medical Research Council of Great Britain

DATA ACCESS	Members of the SPHSU research team have access to the data, and at this time, public use versions of the file are not available. Access has been granted to research teams which have worked on collaborative projects with the data collectors. In the future, data may be deposited with the UK Data Archive. Researchers wishing to collaborate with the SPHSU team should discuss their proposal with Dr. Patrick West or Dr. Helen Sweeting.

West of Scotland Twenty-07 Study

west of Scotland Twenty-07 Study		
CONTACT PERSON / DETAILS	Michaela Benzeval	
	MRC Social and Public Health Sciences Unit	
	6 Lilybank Gardens	
	Glasgow, G12 8RZ UK	
	Phone +44 (0)141 357 3949	
	Fax +44 (0)141 337 2389	
	michaela@msoc.mrc.gla.ac.uk	
	http://www.msoc-mrc.gla.ac.uk	
SUMMARY OF STUDY	The survey is a resource for all Unit programmes. Its aim is to investigate the social	
	processes producing or maintaining differences in health by key social positions (in	
	particular, social class, gender, area of residence, age, ethnicity, and family composition).	
	The survey should continue until 2007 (i.e. for twenty years).	
MAIN TOPICS COVERED	Ageing and older people; children; crime and justice; demography and migration; education	
	and training; employment and labour markets; ethnicity and national identity; income, wealth	
	and spending; sex and gender; health and disability; household goods and technology;	
	households and families; housing; leisure; living conditions; social care and welfare;	
	transport, travel, and tourism; young people	
START DATE	1987	
DATA COLLECTION DATES	Main interviews with each cohort at four time points between 1987 and 2001 plus two	
	additional postal contacts with the youngest age group. Until 2007 (twenty years)	
REGIONS COVERED	Glasgow, Central Clydsedale Conurbation	
UNITS STUDIED	Individuals	
METHODS OF DATA	Home-based interviews by qualified nurses and postal questionnaires. Originally only paper	
COLLECTION	questionnaires were used, but now face-to-face interviews are also conducted by nurse	
	interviewers using CAPI. For the 2000-2 the interviews have been computer-based,	
	administered by trained nurses.	
SAMPLE / POPULATION	Random sample of individuals aged 15, 35 and 55 in 1987 in the Greater Glasgow	
	conurbation	
SAMPLING FRAME	West of Scotland Voluntary Population Survey (enhanced electoral registration form). Cases	
	were identified through a stratified random sample of 3 age cohorts (people aged 15, 35 and	
	55 in 1987) of residents in West Central Scotland (with an aim to contact 1000 people per	
	age cohort), plus 600 additional people from the same age cohorts who lived in selected	
	areas of Glasgow. Regions of Glasgow and the rest of the West of Scotland were selected	
	to include areas with both good and poor health profiles. The study design has three	
	components: (1) the regional sample - a random sample of people living in the Central	
	Clydeside Conurbation, (2) the locality samples - random samples of people from two	
	localities in Glasgow City, and (3) Sub-studies - in which small numbers of respondents from	
	either the regional or locality samples are invited to take part in more focused studies.	
TYPE OF SAMPLE	Stratified sample	
INITIAL SAMPLE SIZE	4510 (in 1987/8)	
ATTRITION / LATER SAMPLE	Varied by age cohort and locality	
SIZES		
SOURCES OF FUNDING	Medical Research Council (MRC)	
MAIN PUBLICATIONS OF STUDY	See http://www.msoc-mrc.gla.ac.uk/Publications/pub/wos2007 MAIN.html	
DATA ACCESS	Members of the SPHSU research team have access to the data, and at this time, public use	
	versions of the file are not available. Access has been granted to research teams which	
	have worked on collaborative projects with the data collectors. In the future, data may be	
	deposited with the UK Data Archive. Researchers wishing to collaborate with the SPHSU	
	team should discuss their proposal with Dr. Patrick West or Graeme Ford.	

Youth Cohort Study - England and Wales

Youth Conort Study - Englar

	m.johnson@natcen.ac.uk
	http://www.dfes.gov.uk/index.htm
SUMMARY OF STUDY	The Youth Cohort Study of England and Wales (YCS) is a major programme of longitudinal
	research designed to monitor the behaviour and decisions of representative samples of
	young people aged sixteen upwards as they make the transition from compulsory education
	to further or higher education, or to the labour market. It tries to identify and explain the
	factors which influence post-16 transitions, for example, educational attainment, training
	opportunities, and experiences at school. The Department for Education and Employment
	conducts the Youth Cohort Study (YCS) on a series of samples of young people in the
	spring after they have completed compulsory schooling, following them up for a number of
	waves. Samples of around 25,000 young people are generally followed up over a two-year
	period. To date (Summer 2004), the YCS covers ten cohorts and over twenty surveys. The
	first survey was carried out in 1985 and the most recent in 2002.
MAIN TOPICS COVERED	Demography and migration; education and training; employment and labour markets;
	ethnicity and national identity; income, wealth and spending; sex and gender; health and
	disability; households and families; housing; young people
START DATE	Spring 1985
DATA COLLECTION DATES	Biennially
REGIONS COVERED	England and Wales
UNITS STUDIED	Individuals
METHODS OF DATA	Generally, data was collected through postal questionnaires with a reminder postcard and
COLLECTION	two questionnaire reminders. Telephone contact is attempted for sample members who do
	not respond to the postal survey.
SAMPLE	Young people of school leaving age (age 16) in England and Wales
SAMPLING FRAME	Records of pupils in year 11 in secondary schools in England and Wales (excluding special
	schools and schools with fewer than 15 year 11 pupils)
TYPE OF SAMPLE	Random sample
INITIAL SAMPLE SIZE	The sample size for the first wave has varied from cohort to cohort. Most have been within
	the range 20000 - 25000. 69% initial response rate
ATTRITION / LATER SAMPLE	Cohort 1, wave 1=69%, wave 2=75%, wave 3=84%; Cohort 2, wave 1=74%, wave 2=80%,
SIZES	wave 3=83%; Cohort 3, wave 1=77%, wave 2=76%, wave 3=76%; Cohort 4, wave 1=71%,
	wave 2=74%, wave 3=78%; Cohort 5, wave 1=72%, wave 2=75%, wave 3=77%; Cohort 6,
	wave 1=69%, wave 2=74%, wave 3=75%; Cohort 7, wave 1=66; wave 2=62%; Cohort 8,
	wave 1=65%, wave 2=64%; Cohort 9, wave 1=65%, wave 2=69%, wave 3=65%; Cohort 10,
	wave 1=55%, wave 2=75%, wave 3=72%
SOURCES OF FUNDING	Department for Education and Employment
MAIN PUBLICATIONS OF STUDY	See http://www.dfes.gov.uk/search/results/kbsearch?sc=dfes&ha=1&qt=youth+cohort+study
DATA ACCESS	Academics and scientific researchers. Data on small geographical areas (anything below
	regional level) is restricted, as is any data that could identify individuals or schools. All of the
	data (anonymised) are deposited in the UK Data Archive at the University of Essex. Data
	are published in a Statistical First Release about nine months after the end of the fieldwork.

	Research Center, Institute for Social Research, University of Michigan (USA)
SUMMARY OF STUDY	CHER seeks to improve cross-national research on household dynamics with a European
	focus by providing a cross-nationally comparative database including both harmonised micro data and national level macro data. This data set was developed to enable researchers to
	compare changes in household composition, demographic details, income, basic health
	status, housing quality, household technology and facilities, and labour market participation for
	both individuals and households from 1990 through 2000 in 19 countries (for all of these years
	for which data is available for each country). The data files are organised by year at the
	household and individual levels, though a longitudinal survey participation file and a country
	level file containing harmonised national level information is also available.
MAIN TOPICS COVERED	Ageing and older people; children; demography and migration; education and training;
	employment and labour markets; income, wealth and spending; sex and gender; health and
	disability; household goods and technology; households and families; housing; living
CTART DATE	conditions; social care and welfare; young people.
START DATE DATA COLLECTION DATES	1990 Appropriate 2000 (2001 for Luxembourg and LIK)
REGIONS COVERED	Annually to 2000 (2001 for Luxembourg and UK) Multinational comparative data sets: Austria, Belgium, Canada, Denmark, Finland, France,
HEGIONS COVENED	Germany, Greece, Hungary, Ireland, Italy, Luxembourg, Netherlands, Poland, Portugal, Spain,
	Sweden, Switzerland, United Kingdom, United States. National samples, England, Wales,
	Scotland for the UK.
UNITS STUDIED	Individuals, Families, Households
METHODS OF DATA	Personal face-to-face interview
COLLECTION	
SAMPLE/POPULATION	Random national samples of private households (except in the case of Sweden and Finland,
	where the households of random national samples of individuals drawn from the national
SAMPLING FRAME	population registers are included). Varies by original survey, includes samples drawn from national registers of individuals, and
SAIVIPLING FRANCE	multi-stage post code and address sampling
TYPE OF SAMPLE	Random national samples of private households (except in the case of Sweden and Finland,
THE OF ORMALE	where the households of random national samples of individuals drawn from the national
	population registers are included).
INITIAL SAMPLE SIZE	For year 1995: Austria 7437 individuals; Belgium 8844 individuals; Denmark 5503 individuals;
	France 13306 individuals; Germany 13028 individuals; Greece 12271 individuals; Hungary
	4445 individuals; Ireland 8531 individuals; Italy 17780 individuals; Luxembourg 5206
	individuals; The Netherlands 9151 individuals; Poland 11529 individuals; Portugal 11858
	individuals; Spain 16263 individuals; UK 9481 individuals. Countries for which 1995 data not
	available - Canada for year 1993 20,000 individuals; Finland for year 1997 8067 individuals;
ATTRITION / LATER SAMPLE	Sweden for year 1997 9597 individuals; Switzerland for year 1999 12931 individuals Varies, see the response rate for the individual data sets, range 50%-97%
SIZES	valies, see the response rate for the individual data sets, range 50 /0-37 /0

SUMMARY OF STUDY	The data are collected to provide harmonised panel data at a European level that facilitate
SOMMANT OF STORE	cross-European analysis of social and economic change. The data also facilitate comparative
	social policy analysis in Europe. The ECHP is a harmonised panel data set designed to collect
	the same information from individuals and households in several European countries. The
	study is co-ordinated in Luxembourg by Eurostat and Eurostat oversees the final data quality
	checking and the distribution of the data. National data collection units implement the study in
	each participating country. The survey covers current information about people's households,
	families, health, income, social contacts, education, housing, attitudes, and economic activity.
	The data also collect detailed income information covering the year prior to the survey, and
	detailed economic activity information that covers the full calendar year in the year prior tot he
	year in which the interview transpires. This enables the researcher to see the range of labour
	market and income source change over a whole year and addition to observing current status
	change at the point of each interview. Researchers should note that the data for Sweden are
	cross-sectional only and do not allow for the tracking of individuals across time.
MAIN TOPICS COVERED	Ageing and older people; children; demography and migration; education and training;
	employment and labour markets; income, wealth and spending; sex and gender; health and
	disability; household goods and technology; households and families; housing; leisure; living
	conditions; social care and welfare; young people
START DATE	1994 for Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, The
	Netherlands, Portugal, Spain, and the UK; 1995 for Austria; 1996 for Finland; 1997 for
DATA COLLECTION DATES	Sweden.
DATA COLLECTION DATES	Annually. Wave 1: Interviews 1994, work history and some income information covering
	calendar year 1993; Wave 2: Interviews 1995, work history and some income information
	covering calendar year 1994; Wave 3: Interviews 1996, work history and some income
	information covering calendar year 1995; Wave 4: Interviews 1997, work history and some income information covering calendar year 1996; Wave 5: Interviews 1998, work history and
	some income information covering calendar year 1996, wave 5: Interviews 1999, work history
	and some income information covering calendar year 1998; Wave 7: Interviews 2000, work
	history and some income information covering calendar year 1999; Wave 8: Interviews 2001,
	work history and some income information covering calendar year 2000.
REGIONS COVERED	National samples: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland,
	Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, United Kingdom
UNITS STUDIED	Individuals, Families, Households
METHODS OF DATA	Visit by an interviewer (pen and paper), Visit by an interviewer (using CAPI), Administrative
COLLECTION	records, Over the telephone (using CATI)
SAMPLE	Private households in each country
SAMPLING FRAME	Sample frames vary by country, but the sample frame is generally a region and address based
	frame from which individual addresses are selected, and interviews attempted with private
	households. Some Nordic countries drew samples of individuals from population registers, then
	followed all members of the households of the sampled individuals who lived in private
	households
TYPE OF SAMPLE	Multi-stage stratified random sampling
INITIAL SAMPLE SIZE	93% of the Wave 1 ECHP sample responded again in Wave 2. Country specific initial response
	rates are: Austria 68%, Belgium 84%, Denmark 62%, Finland not yet released, France 79%,
	Germany 48%, Greece 90%, Ireland 56%, Italy 91%, Luxembourg 41%, The Netherlands
ATTRITION / LATER CALLS	87.5%, Portugal 89%, Spain 67%, Sweden 75%, United Kingdom 72%
ATTRITION / LATER SAMPLE	In 1997 (Wave 4) the sample sizes were: Austria 3142 households, 6999 individuals; Belgium
SIZES	3039 households, 5741 individuals; Denmark 2745 households, 4628 individuals; Finland 4108
	households, 8067 individuals; France 6176 households, 12143 individuals; Germany 6163
	households, 12059 individuals; Greece 4604 households, 10968 individuals; Ireland 2945
	households, 6868 individuals; Italy 6713 households, 16594 individuals; Luxembourg 2523 households, 5805 individuals; The Netherlands 5049 households, 9089 individuals; Portugal
	4802 households, 11625 individuals; Spain 5794 households, 14819 individuals; Sweden 5891

	households, 9597 individuals; United Kingdom 4965 households, 9146 individuals
WEIGHTING	Data are weighted to reflect the distribution of population groups in each country. The data are weighted centrally by Eurostat, and ECHP weights are not always identical to weights developed by the individual national data collection units for use with the data sets individually. All weights are cross-sectional, but also reflect the possibility of a person remaining in the panel by that wave. The cross-sectional weight for the most recent wave of data used acts as the longitudinal weight up to that wave.
SOURCES OF FUNDING	Eurostat for those countries whose data is drawn exclusively for the ECHP; in five cases, the national contribution to the ECHP is drawn from an independent national longitudinal study with separate funding (Luxembourg - PSEL I then PSEL II; The Netherlands - , Germany - SOEP; Sweden - HUS; UK - BHPS), though Eurostat provides funds to convert the data into ECHP format
MAIN PUBLICATIONS OF STUDY	See http://forum.europa.eu.int/Public/irc/dsis/echpanel/library?l=/doc_pan/5_publications&vm=detailed. ed&sb=Title
DATA ACCESS	Any researcher whose proposed use of the data is approved by Eurostat can use the ECHP data. Generally, approved users will work at either a government agency or a social science/academic institution. The ECHP is available in two forms: the PDB and the UDB. The Production Database (PDB) contains all original information collected by each national data collection unit. Access to the PDB is highly restricted. The PDB is available for use only at Eurostat or within a national data collection unit (NDU). Access to the PDB files requires the approval of Eurostat as well as the NDU of all countries whose PDB data will be accessed. The User's Database (UDB) contains anonymised and amalgamated variables for all participating countries. Most researchers will access the UDB.

European Longitudinal Study of Ageing Health and Competence (EXCELSA)

SUMMARY OF STUDY	The study aimed to develop core indices of physiological, psychological and social competence and to assess relationships between ageing, health and competence in Europe. The study examined the cognitive competence of people aged 30-85 across equal numbers of men and women in 10 countries who occupied different psycho-social and socio-demographic statuses. Clinical measures, including height, weight, handgrip, and peak flow, also were collected.
MAIN TOPICS COVERED	Ageing and older people; children; demography and migration; education and training; employment and labour markets; ethnicity and national identity; income, wealth and spending; sex and gender; health and disability; households and families; housing; leisure; living conditions
START DATE	1999
DATA COLLECTION DATES	Annually
REGIONS COVERED	Multinational comparative data sets: Austria, Finland, Germany, Italy, Lithuania, Netherlands, Poland, Spain, Ukranian SSR, United Kingdom
UNITS STUDIED	Individuals, households
METHODS OF DATA	90-min in-home face-to-face interview. It contains a series of questions, instruments, scales
COLLECTION	and physical tests assessing social relationships and care-giving, mental abilities, well-being, personality, mastery and perceived control, self-reported health, lifestyles, anthropometry, bio behavioural measures and socio-demographic variables.
SAMPLE	Equal numbers of men and women in 4 age cohorts, 30-49, 50-64, 65-74, and 75-85
SAMPLING FRAME	Households
TYPE OF SAMPLE	Quota sampling
INITIAL SAMPLE SIZE	
ATTRITION / LATER SAMPLE SIZES	Not relevant as quota sampling employed
SOURCES OF FUNDING	
MAIN PUBLICATIONS OF STUDY	
DATA ACCESS	Limited access is available in accordance with the European Study of Aging Protocol (ESAP). Contact the research team to discuss possible uses of the data.

SUMMARY OF STUDY	The French Longitudinal Study allows the tracking of population trends in France, and adds a
	component of longitudinal analysis to the Census data collection. The data set links Census
	information from a 1% sample of the national population with annual mortality and event
	data.
MAIN TOPICS COVERED	Ageing and older people; children; demography and migration; education and training;
	employment and labour markets; ethnicity and national identity; income, wealth and
	spending; sex and gender; health and disability; household goods and technology;
	households and families; housing; living conditions; social care and welfare; transport, travel,
	and tourism; young people
START DATE	1968
DATA COLLECTION DATES	Annually
REGIONS COVERED	National sample
UNITS STUDIED	Individuals, Households
METHODS OF DATA	Census data, administrative records, linked sources
COLLECTION	
SAMPLE	The resident population of France
SAMPLING FRAME	Census data and other official records
TYPE OF SAMPLE	Random sampling, with top-up sampling at each Census
INITIAL SAMPLE SIZE	1% of the resident population from the last Census; 560,000 people from the 1982 Census
ATTRITION / LATER SAMPLE	Nearly 100%, as drawn from administrative records
SIZES	
SOURCES OF FUNDING	INSEE
MAIN PUBLICATIONS OF STUDY	For a comprehensive list of publications see http://www.insee.fr/en/ppp/collections.htm
DATA ACCESS	Restricted to 'safe setting'

The Luxembourg Household Panel (PSELL) I & II

SUMMARY OF STUDY	
SUMMANT OF STUDY	PSELL I and PSELL II traces living and working conditions of people living in private
	households in the Grand Duchy of Luxembourg. The study follows households across time,
	collecting information on both the household and the individual levels. The survey includes
	collection of household budget management, and tries to assess overall wealth rather than
	simply collection income data. The study also collects a wide range of health data. SPELL II
MAIN TORIOG COVERER	is an updated version of SPELL I.
MAIN TOPICS COVERED	Ageing and older people; children; demography and migration; education and training;
	employment and labour markets; ethnicity and national identity; income, wealth and
	spending; sex and gender; health and disability; household goods and technology;
	households and families; housing; leisure; living conditions; social care and welfare; young
OT 4 D 4 T 5	people
START DATE	SPELL I 1985, SPELL II 1994
DATA COLLECTION DATES	Annually, fieldwork runs May through October.
REGIONS COVERED	National sample
UNITS STUDIED	Income groups within a household, Households, Individuals
METHODS OF DATA	The PSELL I and II are collected in face-to-face interviews using paper and pencil
COLLECTION	questionnaires. A minority of interviews is conducted also over the telephone. The
	questionnaires are entered into the computer using an advanced data entry program, which
	checks for completeness and consistency of the data.
SAMPLE / POPULATION	A representative sample of people living in Luxembourg who are protected by social security;

SAMPLING FRAME TYPE OF SAMPLE INITIAL SAMPLE SIZE	the basic sample represents 97% of the country's population. Foreign residents who have no links with the country's social security system or who do not live in a household where at least one of the members has such links; elderly persons living in a collective household such as an old people's home; and civil servants and employees at the European Institutions in Luxembourg are excluded. Register from the Inspectorate General for Social Security. In 1991 an extension was added to the sample. These households were selected in wave 1 already, but were not included in the sample by then. In 1991 these households and their split-offs were included. PSELL II sample has been drawn from PSELL I sample. The PSELL I (1985-1994) was stopped because the sample was no longer representative for the population in Luxembourg, in a country which experienced a relative high immigration. Simple random sample. SPELL I 6,110 individuals in 2,012 households (73% initial response rate); SPELL II 8,232
ATTRITION / LATER SAMPLE	individuals in 2,978 households (around 70% initial response rate)
WEIGHTING	Estimations of population totals and related figures must be weighted in order to produce unbiased estimates. The weights comprise adjustment for the sampling procedure in wave one, and adjustments to account for attrition in later waves. Therefore the sample is reweighted every wave (cross-sectional weights).
SOURCES OF FUNDING	The Luxembourg Government through a contract with CEPS/INSTEAD primarily funds the study. Additional funding is provided through EUROSTAT in correspondence with cloning the ECHP (European Community Household Panel) sample for Luxembourg.
MAIN PUBLICATIONS OF STUDY	Dickes, P.; P. Hausman; A. Kerger; 1987: Méthodologie générale & répertoire des variables -1985- première vague, PSELL no. 1. Hausman, P.; F. Courtois; 1987: L'état de la pauvreté au Grand-Duché de Luxembourg, PSELL no 2. Hausman, P.; 1987: Description des niveaux de vie et de bien-être économique en 1985: principaux résultats, PSELL no.3. Tournois, J.; 1988: Logistique et documentation, PSELL no.9. Tournois, J.; 1988: Documentation transversale des variables "1985": Première vague, PSELL no. 10. Kerger, A.; R. Hausman, P.; 1990: Les indicateurs sociaux de pauvreté: Tableaux de base et documentation. PSELL no. 21. Hausman, P.; 1990: Imputation in income, PSELL no. 27.
DATA ACCESS	Access to the original data is allowed for scientific and academic researchers. People can also access the version of the SPELL I data cloned into the ECHP format by following the procedures to access the ECHP (Waves 1-3 only) through EUROSTAT. Likewise for SPELL II (Waves 2 – 9 only). CEPS/Instead has European Union funding for a program called IRIIS-CI that offers funding to researchers who wish to come to the Differdange facility to work with the micro data. The PSEL-II data is cloned into 4 comparative data sets, PACO, CHER, ECHP, and Luxembourg Income Study, and users can also access the data by accessing these data sets.

The Swedish Level of Living Survey

The Swedish Level of Living Survey	
CONTACT PERSON / DETAILS	Robert Erikson
SUMMARY OF STUDY	To study the distribution of welfare in Sweden. Influenced by Titmuss (1958) 'command over
	resources' as an essential concept for investigations of people's welfare and well-being.
MAIN TOPICS COVERED	Health and access to care, employment and working conditions, economic resources,
	educational resources, family and social interaction, housing and neighbourhood facilities,
	security of life and property, recreation and culture, political resources.
START DATE	1968
DATA COLLECTION DATES	1974, 1981, 1991
REGIONS COVERED	National sample
UNITS STUDIED	Individuals, institutions (workplaces)
METHODS OF DATA	Face-to-face interview (questionnaires)
COLLECTION	
SAMPLE / POPULATION	0.001 random sample of Swedish population
SAMPLING FRAME	Swedish population age 15-75
TYPE OF SAMPLE	Random sample
INITIAL SAMPLE SIZE	Approx 6,500 (90.8% initial response rate)
ATTRITION / LATER SAMPLE	Non-response rates in 1974 914.8%), 1981 (17.6%), 1991 (20.9).

SIZES	Additional survey carried out in 1992 including all older than 75 who had previously been
	surveyed. Sample = 1936, non-response just 4.6%.
	All workplaces of interviewees with 10+ workforce included in 1991 round of interviews.
SOURCES OF FUNDING	Initially a government commission. Statistics Sweden from 1970s, Swedish Institute of Social
	Research.

	and Coordination of Research.
DATA ACCESS	

Sweden. Individual Development and Adaptation: The IDA program

CONTACT PERSON / DETAILS	Lars. R. Bergman
SUMMARY OF STUDY	Main purpose is to investigate how person and environmental factors, separately and in interaction with each other, operate and influence the course of individual development in a lifelong perspective. A central theme is to shed light on the processes regulating individuals' patterns of adaptation in adult life – including social, mental and physical aspects. Follow-up of two age cohorts in one community from the age of 10 and 13 respectively, up to adulthood.
MAIN TOPICS COVERED	Educational, vocational career choices, work and spare time activities, life satisfaction, social, mental and physical well-being, criminal behaviour, drug abuse, social and physical environments
START DATE	1965
DATA COLLECTION DATES	Annually to 12th grade (age 19), at various age points. Latest was in 1998
REGIONS COVERED	Individual community on Sweden: a municipality in central Sweden
UNITS STUDIED	Individual, institutions (environment measures),
METHODS OF DATA COLLECTION	Administrative/public records, questionnaire, biological measures (sub-sample)
SAMPLE / POPULATION	All 3rd, 6th, 8th graders attending the regular school system
SAMPLING FRAME	School records
TYPE OF SAMPLE	Clustered
INITIAL SAMPLE SIZE	1393
ATTRITION / LATER SAMPLE SIZES	1,400 of the 3rd graders active in 1998
SOURCES OF FUNDING	Swedish Research Council
MAIN PUBLICATIONS OF STUDY	Magnusson, D., Dunér, A. and Zetterblom, G. (1975) Adjustment – a longitudinal study. Stockholm: Almqvist and Wiksell.

	Fax: +61 3 8344 2111	
	Email: m.wooden@unimelb.edu.au or hilda-inquiries@unimelb.edu.au	
	www: http://www.melbourneinstitute.com/hilda	
SUMMARY OF STUDY	The Household, Income and Labour Dynamics in Australia (HILDA) Survey is a household-	
	based panel study which began in 2001. It collects information about economic and	
	subjective well-being, labour market dynamics, and family dynamics.	
MAIN TOPICS COVERED	The primary objective of the HILDA Survey is to support research questions falling within	
	three broad areas:	
	income dynamics - with a particular focus on how households respond to policy	
	changes aimed at improving financial incentives, and interactions between changes in family status and poverty,	
	 labour market dynamics - with a focus on low-to-middle income households, female participation, and work to retirement transitions, and 	
	 family dynamics - focusing on family formation, well-being and separation, along with post-separation arrangements for children and links between income support and family formation and breakdown. 	
	The range of topics covered in HILDA extends well beyond this to include such things as life satisfaction, health outcomes, and neighbourhood characteristics, time usage and workfamily balance. A feature of the HILDA survey is that modules on specific topics can be included in each wave. Examples so far include:	
	Wave 2 - wealth holdings of individuals and households	
	Wave 3 - retirement intentions and retirement planning of people aged 45 years and	
	over	
	Wave 4 - young people's educational and job expectations, the impact of disabilities on	
	work and study, and take up of private health insurance, and	
	Wave 5 – fertility.	
START DATE	2001	

Administrative Longitudinal Data Set (LDS)

	Administrative Lengitudinal Pata Cot (LDC)	
CONTACT PERSON / DETAILS	Research Strategies Section Strategic Policy and Analysis Branch	
	Department of Family and Community Services	
	Box 7788	
	Canberra Mail Centre ACT 2610	
	www: http://www.facs.gov.au	
SUMMARY OF STUDY	The Family and Community Services (FaCS) administrative Longitudinal Data Set (LDS) is	
	a unique administrative longitudinal dataset drawn from fortnightly records of income	
	support recipients. Both 1% and 10% LDS samples are available for use.	
MAIN TOPICS COVERED	The LDS records contain information on the personal characteristics and payment details of	
	pensioners and beneficiaries and their partners. As an administrative dataset, it does not	

	continue to display information on former recipients. Hence, gaps appear in the histories of	
	individuals in the sample for those periods of non-income support.	
START DATE	Records in the LDS 1% sample go back to January 1995.	
DATA COLLECTION DATES	Administrative employee data is collected fortnightly.	
REGIONS COVERED	Australia	
UNITS STUDIED	Individuals	
METHODS OF DATA	Administrative data	
COLLECTION		
SAMPLE	FaCS engaged the Australian Bureau of Statistics to develop a method to derive a 1%	
	sample from the administrative databases. There is also a LDS 10% sample, which is	
	considerably more demanding to use, but gives a larger sample size.	
SAMPLING FRAME	Data is drawn from the systems (managed by Centrelink) that administer the provision of	
	income support to Australians.	
INITIAL SAMPLE SIZE		
ATTRITION / LATER SAMPLE	N/A	
SIZES		
SOURCES OF FUNDING	Family and Community Services (FaCS)	
MAIN PUBLICATIONS OF STUDY	Some papers to emerge from initial and exploratory analysis of the LDS can be found	
	among FaCS Policy Research Papers at:	
	http://www.facs.gov.au/internet/facsinternet.nsf/research/prps-nav.htm	
DATA ACCESS	Due to the sensitive nature of the data, only a few people outside of FaCS have been	
	granted access. These people were required to prove that a very secure site was going to	
	be used for the conduct of the research.

SUMMARY OF STUDY The Christchurch Health and Development Study (CHDS) was originally set up to investigate the impact of single parenthood on child health and well-being. Since then the
investigate the impact of single parenthood on child health and well-being. Since then the
focus has been broadened to reflect interest in a remove of increase including market be able
focus has been broadened to reflect interest in a range of issues, including mental health
and personal adjustment as the cohort members become young adults. The study has high
response rates, and has generated much research interest.
MAIN TOPICS COVERED Key areas of data collection have included: prenatal and perinatal history; family social
background; parental characteristics; family change and stability; exposure to child abuse
and family dysfunction; child health and health care utilisation; educational achievement;
behavioural adjustment at school; peer affiliations and relationships; mental health and
psychosocial adjustment in adolescence and young adulthood; and participation in tertiary
education and the workforce.
START DATE 1977
DATA COLLECTION DATES Ages 4 months, 1 – 16 years (annually), 18, 21, and 25
REGIONS COVERED Christchurch, Canterbury, New Zealand
UNITS STUDIED Individuals
METHODS OF DATA Information was gathered from a combination of sources including parental interviews,
COLLECTION teacher reports, psychometric testing, child interviews, and medical and police records.
SAMPLE Birth cohort. All children born in all hospitals in the Christchurch urban region between April
15, 1977 and August 5, 1977. During this period, a total of 1,310 live births occurred and
the parents of 1,265 (97%) of these children agreed to participate in the study. The
consenting sample consisted of 635 (50%) males and 630 (50%) females.
SAMPLING FRAME Births at all hospitals in the Christchurch urban region between April 15, 1977 and August 5,
1977.
INITIAL SAMPLE SIZE 1,265 individuals
ATTRITION / LATER SAMPLE At the follow-up at age 21, the retention rate was 80% of the original sample. Those
SIZES participants who moved outside of the Christchurch area before the age of 16 were not
followed up. Most of the sample loss has been due to participants moving overseas.
SOURCES OF FUNDING The CHDS has been supported by research grants from the Health Research Council of
New Zealand, the National Child Health Research Foundation, the Canterbury Medical
Research Foundation, and the New Zealand Lottery Grants Board.
MAIN PUBLICATIONS OF STUDY The study has published over 230 scientific papers, books and book chapters describing the
25 year life history of the cohort.
DATA ACCESS Researchers wanting access to the data must contact the Research Unit. The Unit would
then scope the data to determine whether the data available are sufficient to answer the
question(s) of interest. Carrying out the research would be subject to staff availability. The
database is complex and requires someone familiar with it to oversee any research.

SUMMARY OF STUDY	The original aim of the Dunedin Multidisciplinary Health and Development Study (DMHDS)	

MAIN TOPICS COVERED	was to investigate the nature and prevalence of some developmental and health problems in three-year-olds and some of the factors associated with those problems (e.g. some perinatal, family and experiential factors). However the study has gone on to become an internationally renowned birth cohort due to its exceptional response rates, and extensive and frequent data collections (now at 10th follow-up). A rich set of data is collected during face-to-face assessments, including physical,
	psychological and social aspects of the participants' lives. Topics include diet; coping and health; sexual, anti-social, and criminal behaviour; blood samples and other physical examinations; mental health; personality and relationships; intellectual ability; employment and SES. DNA was collected at the age 26 follow-up.
START DATE	1972
DATA COLLECTION DATES	Ages 3, 5, 7, 11, 13, 15, 18, 21, 26, and 32
REGIONS COVERED	Dunedin, Otago, New Zealand
UNITS STUDIED	Individuals
METHODS OF DATA	Half-day or full-day assessments for interviews, tests, and examinations of the children
COLLECTION	(parents were also included up to age 15); hospital records; police records; blood samples; informant reports from parents, friends, and teachers.
SAMPLE	Birth cohort. All those born at Queen Mary Hospital between April 1, 1972 and March 31, 1973, and whose mothers lived within the Dunedin Metropolitan Health District boundaries at the time of their child's birth and who were still living in the Otago region at the time of the age 3 assessment, were eligible for inclusion. The base sample was composed of 535 (52%) males and 502 (48%) females. Fewer than 7% of the study members identified themselves as non-white (Maori or Polynesian). The social class and ethnicity of their families matched those of the South Island's general population.
SAMPLING FRAME	Births at Dunedin's Queen Mary Hospital between April 1, 1972 and March 31, 1973.
INITIAL SAMPLE SIZE	1,139 individuals (at first follow-up)
ATTRITION / LATER SAMPLE SIZES	91% of eligible sample members participated at the first follow-up. The retention rate (of those assessed at first follow-up) has been above 90% for almost all of the follow-up assessments.
SOURCES OF FUNDING	All of the costs associated with attending the assessments, such as childcare, travel, and accommodation, are covered by the Dunedin Research Unit. Core funding for the Unit comes from the Health Research Council of New Zealand.
MAIN PUBLICATIONS OF STUDY	Approximately 900 publications and reports have been generated by the study.
DATA ACCESS	The policies in place to obtain access to data include having an original question, the
	support of the Principal Investigator and being registered at the Research Unit as an Associate Investigator. Copies of data sets held outside the Unit by any investigator must be kept secure and used only for authorized purposes.

	who had died) participated, and in 1996, 86.7% of eligible respondents participated.
SOURCES OF FUNDING	The National Longitudinal Surveys (NLS) are a set of surveys sponsored by the Bureau of
	Labor Statistics, U.S. Department of Labor.
MAIN PUBLICATIONS OF STUDY	The NLS Annotated Bibliography is an on-going effort to provide the public with an up-to- date searchable record of research based on data from all cohorts of the National
	Longitudinal Surveys. It contains citations and abstracts of NLS based journal articles, working papers, conference presentations, and dissertations.
	http://www.chrr.ohio-state.edu/nls-bib/
DATA ACCESS	One of the strengths of the National Longitudinal Surveys (NLS) program is the ease with which the data can accessed. NLS data are on cohort specific CD-ROMs complete with user-friendly search and retrieval software.
	Data for the NLSY79 are distributed on three CD-ROMs: the NLSY79 main file without the restricted geocode data; the main file with all geocode data; and the NLSY79 work history file.

National Longitudinal Survey of Youth 1997 (NLSY97)

	/ OT YOUTH 1997 (NLSY97)
CONTACT PERSON / DETAILS	The National Longitudinal Surveys
	Bureau of Labor Statistics
	2 Massachusetts Avenue NE, Room 4945
	Washington, D.C. 20212-0001
	Phone: (202) 691-7410
	Fax: (202) 691-7425
	Email:mailto:NLS Info@bls.gov
	www: http://www.bls.gov/nls/nlsy97.htm
SUMMARY OF STUDY	The National Longitudinal Survey of Youth 1997 (NLSY97) consists of a nationally
	representative sample of approximately 9,000 youths who were 12 to 16 years old as of
	December 31, 1996. The survey documents the transition from school to work, as these
	individuals continue to be interviewed on an annual basis. Data from the NLSY97 will aid in
	determining how youth experiences relate to establishing a career, participating in
	government programs, and forming a family. Over time, information from the NLSY97 will
	allow researchers to compare the progress of this cohort to that of the earlier National Longitudinal Surveys (NLS) cohorts.
MAIN TOPICS COVERED	
WAIN TOPICS COVERED	The NLSY97 collects extensive information on youths' labour market, behaviour, and
	educational experiences. Data on their family and community backgrounds are included in
	the survey, and in Round 1, information was collected from one of the youth's parents.
	Youth also took the computer adaptive form of the Armed Services Vocational Aptitude
	Battery (CAT-ASVAB), which measures knowledge and skills in multiple areas including
	reading and mathematics. Information has been gathered from high schools in the sample
	areas where the respondents live, and transcripts are gathered as the youths leave high
	school.
	Aside from educational and labour market experiences, the NLSY97 contains detailed
	information on many other topics. Subject areas in the questionnaire include: youths'
	relationships with parents, contact with absent parents, marital and fertility histories, dating,
	sexual activity, onset of puberty, training, participation in government assistance programs,
	expectations, time use, criminal behaviour, and alcohol and drug use. Areas of the survey
	that are potentially sensitive, such as sexual activity and criminal behaviour, comprise the
	self-administered portion of the interview.
START DATE	1997/98
DATA COLLECTION DATES	Every year starting in 1997/98
REGIONS COVERED	United States
UNITS STUDIED	Individuals
METHODS OF DATA	After a household informant was chosen to complete the screener, household roster, and
COLLECTION	non-resident roster questionnaire, interviewers used a CAPI system to collect data. The
	parent and youth portions of the NLSY97 survey used an audio computer-assisted self-
	interview (ACASI) to obtain potentially sensitive information.
SAMPLE	The NLSY97 cohort comprises two independent probability samples: a cross-sectional
	sample and an over sample of black and/or Hispanic respondents. The NLSY97 cohort was
	selected in two phases. In the first phase, a list of housing units for the cross-sectional
	sample and the over sample was derived from two independently selected, stratified
	multistage area probability samples. This ensured an accurate representation of different
	sections of the population defined by race, income, region, and other factors. In the second
	phase, sub-samples of the eligible persons identified in the first phase were selected for
	interview.
SAMPLING FRAME	147 non-overlapping primary sampling units (PSUs) were selected from NORC's (National
CAMI LING I HAVIL	Organization for Research at the University of Chicago) 1990 national sample, to use for the
	Torganization for nesearch at the university of Unicago, 1990 hational sample, to use for the

	NLSY97 area probability sample.
INITIAL SAMPLE SIZE	8,984 individuals from 6,819 unique households
ATTRITION / LATER SAMPLE	After seven rounds, NLSY97 had retained 86.4% of the respondents.
SIZES	
SOURCES OF FUNDING	Bureau of Labor Statistics, U.S. Department of Labor
MAIN PUBLICATIONS OF STUDY	The NLS Annotated Bibliography is an on-going effort to provide the public with an up-to-
	date searchable record of research based on data from all cohorts of the National
	Longitudinal Surveys. It contains citations and abstracts of NLS based journal articles,
	working papers, conference presentations, and dissertations.

DATA ACCESS	Data for the NLSY97 are distributed on the Original Cohort Databases CD-ROM.

Panel Study of Income Dynamics (PSID)		
CONTACT PERSON / DETAILS	Professor Frank Stafford / Associate Professor Robert Schoeni	
	PSID Staff	
	The Panel Study of Income Dynamics	
	Institute for Social Research	
	PO Box 1248	
	Ann Arbor, MI 48106-1248	
	Email: psidhelp@isr.umich.edu	
SUMMARY OF STUDY	The Panel Study of Income Dynamics (PSID), begun in 1968, is a longitudinal study of a	
	representative sample of U.S. individuals (men, women, and children) and the family units in	
	which they reside. It emphasizes the dynamic aspects of economic and demographic	
	behaviour, but its content is broad, including sociological and psychological measures.	
MAIN TOPICS COVERED	Economic and demographic topics are covered, with substantial detail on income sources	
	and amounts, employment, family composition changes, and residential location. Content of	
	a more sociological or psychological nature is also included in some waves of the study.	
START DATE	1968	
DATA COLLECTION DATES	From 1968 to 1996, the PSID interviewed and re-interviewed individuals from families in the	
	core sample every year. In 1997 the data collection changed to biennial.	
REGIONS COVERED	United States	
UNITS STUDIED	Individuals and families	
METHODS OF DATA	The PSID was collected in face-to-face interviews using paper and pencil questionnaires	
COLLECTION	between 1968 and 1972. Thereafter, the majority of interviews were conducted over the	
OCCLEOTION	telephone. In 1993, the PSID introduced the use of computer-assisted telephone	
	interviewing (CATI). In the 1999 wave, 97.5% of the interviews were conducted over the	
	phone, and all interviews were conducted using computer-based instruments.	
SAMPLE	The PSID sample, originating in 1968, consisted of two independent samples: a cross-	
SAMPLE	sectional national sample and a national sample of low-income families. The cross-	
	sectional national sample and a national sample of low-income families. The cross-	
	(SRC). Commonly called the SRC sample, this was an equal probability sample of	
	households from the 48 contiguous states and was designated to yield about 3,000	
	completed interviews. The second sample came from the Survey of Economic Opportunity	
	(SEO), conducted by the Bureau of the Census for the Office of Economic Opportunity. In	
	the mid-1960's, the PSID selected about 2,000 low-income families with heads under the	
	age of 60 from SEO respondents. The sample, known as the SEO sample, was confined to	
	Standard Metropolitan Statistical Areas (SMSA's) in the North and non-SMSA's in the	
	Southern region. The PSID core sample combines the SRC and SEO samples.	
	In 1997 two major changes were made to the PSID sample: 1) a reduction of the core	
	sample and 2) the introduction of a refresher sample of post 1968 immigrant families and	
	their adult children.	
SAMPLING FRAME	Bureau of the Census and SRC national sampling frames	
INITIAL SAMPLE SIZE		
ATTRITION / LATER SAMPLE	Approximately 4,800 families and 18,000 individuals	
SIZES	About 88% of the individuals remained after the second year, implying an attrition rate of	
SIZES	12%. A smaller proportion left the PSID in each year after the first – generally about 2.5% to	
COURCES OF FUNDING	3% annually. The cumulative attrition rate is now over 51%.	
SOURCES OF FUNDING	While the PSID's original funding agency was the Office of Economic Opportunity of the	
	United States Department of Commerce, the study's major funding source is now the	
	National Science Foundation. Substantial additional funding has been provided by the	
	National Institute on Aging, the National Institute of Child Health and Human Development,	
	the Office of the Assistant Secretary for Planning and Evaluation of the United States	
	Department of Health and Human Services, the Economic Research Service of the United	
	States Department of Agriculture, the United States Department of Housing and Urban	
	Development, and the United States Department of Labor, and the Center on Philanthropy	
	at the Indiana University-Purdue University.	

MAIN PUBLICATIONS OF STUDY	The study has generated a large number of publications, some of which can be accessed
	at:
	http://psidonline.isr.umich.edu/Publications/
DATA ACCESS	Public release datasets (currently containing 1968 – 2003 data), including selected supplemental data, and Child Development Supplement (CDS) 1997 and 2002 data are
	available.
	http://simba.isr.umich.edu/

Survey of Income and Program Participation (SIPP)

Survey of Income and Progra	
CONTACT PERSON / DETAILS	Judith Eargle
	Phone: (301) 763-3819
CUITANA DV OF CTUDY	Email: hhes.sipp.survey@census.gov (SIPP survey help)
SUMMARY OF STUDY	The Survey of Income and Program Participation (SIPP) is a longitudinal, multi-panel survey
	primarily of adults in households in the United States. Its main objective is to collect source
	and amount of income, labour force information, program participation and eligibility data,
	and general demographic characteristics to measure the effectiveness of existing federal,
	state, and local programs; to estimate future costs and coverage for government programs,
	such as food stamps; and to provide improved statistics on the distribution of income in the
	country.
MAIN TOPICS COVERED	SIPP offers detailed information on cash and non-cash income on a sub-annual basis. The
	survey also collects data on taxes, assets, liabilities, and participation in government
	transfer programs.
START DATE	The '1984' panel (for which interviews began in 1983)
DATA COLLECTION DATES	Each year of 1984 – 1993, 1996, 2000, and 2001
REGIONS COVERED	United States
UNITS STUDIED	Individuals
METHODS OF DATA	Interviews are conducted by personal visit and by de-centralized telephone.
COLLECTION	
SAMPLE	The SIPP sample is a multistage-stratified sample of the U.S. civilian non-institutionalized
	population. The survey design is a continuous series of national panels, with sample size
	ranging from approximately 14,000 to 36,700 interviewed households. The duration of each
	panel ranges from $2\frac{1}{2}$ years to 4 years. For the $1984 - 1993$ panels, a panel of households
	was introduced each year in February. A 4-year panel was introduced in April 1996. A 2000
	panel was introduced in February 2000 for two waves. A 3-year 2001 panel was introduced
	in February 2001.
SAMPLING FRAME	The frame for the selection of sample PSUs consists of a listing of U.S. counties and
	independent cities, along with population counts and other data for those units from the
	most recent census of population. SIPP selects addresses from five separate, non-
	overlapping sampling frames maintained by the Census Bureau.
INITIAL SAMPLE SIZE	The first sample, the 1984 panel, interviewed sample members in 19,878 households. The
ATTRITION / LATER CAMPLE	1996 re-designed panel had an initial sample size of 40,188 households.
ATTRITION / LATER SAMPLE	Wave 1 nonresponse rates for SIPP have been about 7.7%. There is usually a sizable
SIZES	sample loss at Wave 2, with a lower rate of additional attrition occurring at each subsequent
	wave. Prior to the 1992 panel, SIPP lost roughly 20% of the original sample by the panel's
	completion. The sample loss rate for the 1996 panel was 35.5% by the end of the 12th, or
COURCES OF FUNDING	final, wave.
SOURCES OF FUNDING	The Bureau of the Census sponsors the survey under the authority of Title 13, United States
MAIN DUDI IOATIONO OF OTUDY	Code, Section 182.
MAIN PUBLICATIONS OF STUDY	A list of publications including a SIPP bibliography, statistical briefs, reports, working papers,
	and issues on housing affordability, and wealth and assets are available at:
DATA 400500	http://www.sipp.census.gov/sipp/pubs.html
DATA ACCESS	All public use microdata files can be obtained on magnetic media or CD-ROM directly from
	the Census Bureau, the Inter-university Consortium for Political and Social Research
	(ICPSR), and the Federal Electronic Research Review and Extraction Tool (FERRET) and
	DataFerrett.

Early Childhood Longitudinal Study Birth Cohort (ECLS-B)

Larry Childricod Longitudinal Study Birtii Conort (LCLS-D)	
CONTACT PERSON / DETAILS	National Center for Education Statistics
	Institute of Education Sciences
	U.S. Department of Education
	1990 K Street, NW
	Washington, DC 20006-5651

SUMMARY OF STUDY	The Early Childhood Longitudinal Study Birth Cohort (ECLS-B) is a multi-source, multi-
	method study focusing on the home and educational experiences of children during their
	first 6 years.
MAIN TOPICS COVERED	The central goal of ECLS-B is to provide a comprehensive and reliable set of data that may
	be used to describe and to better understand children's early development; their health
	care, nutrition, socio-emotional and physical well-being; their preparation for school; key
	transitions during the early childhood years; their experiences in early care and education
	programs, kindergarten, and first grade; and how their early experiences relate to their later
	development, learning, and experiences in school.
	Data are collected from children and their parents at every wave. Data from children's early
	care and education providers, teachers, and schools are collected at different waves.
START DATE	2001
DATA COLLECTION DATES	At age 9 months, and 24 months
REGIONS COVERED	United States
UNITS STUDIED	Individuals
METHODS OF DATA	Data were collected by computer-assisted personal interviews (CAPI) with parents, self-
COLLECTION	administered questionnaires, father questionnaires, and direct child assessments during an
	in-person home visit. Data were also obtained from children's birth certificates and via field
	staff observation of the children's behaviour and home setting during the home visit.
SAMPLE	Births were sampled within a set of primary sampling units (PSUs) and in some cases
	secondary sampling units in order to control data collection costs. Children were mostly
	sampled via registered births from the National Center for Health Statistics (NCHS) vital
	statistics system.
SAMPLING FRAME	An area sampling frame and birth registries.
INITIAL SAMPLE SIZE	The parents of 10,688 children born in 2001 participated in the first wave of the study when
	the children were approximately 9 months old. Child assessments were conducted on a total
	of 10,221 of these children.
ATTRITION / LATER SAMPLE	The parents of 9,835 children participated in the second wave of the study when the
SIZES	children were approximately 24 months old. Child assessments were conducted on a total of
	9,218 of these children.
SOURCES OF FUNDING	National Center for Education Statistics (NCES)
MAIN PUBLICATIONS OF STUDY	Several documents are available to help users familiarize themselves with the ECLS-B.
	Users should begin with the user's manuals as these contain information about all aspects
	of the study and should be sufficient for most purposes. For those who desire more
	information about a particular element of the study, there is the current report on sampling,
	response rates, weighting, nonresponse bias analysis, and comparison of estimates, as well
	as a psychometric report.
DATA ACCESS	http://nces.ed.gov/pubsearch/getpubcats.asp?sid=024
DATA ACCESS	ECLS-B restricted use data files are released approximately two years after data collection
	ends for each wave (e.g., 9 months, 2 years). Due to NCES' confidentiality legislation,
	researchers will need to obtain (or amend) a restricted data license to access restricted data
	from ECLS.

Early Childhood Longitudinal Study Kindergarten Cohort (ECLS-K)

CONTACT PERSON / DETAILS	National Center for Education Statistics
	Institute of Education Sciences
	U.S. Department of Education
	1990 K Street NW
	Washington, DC 20006–5651
	Elvira Germino Hausken
	Phone: (202) 502-7352
	Email: Elvira.Hausken@ed.gov
SUMMARY OF STUDY	The Early Childhood Longitudinal Study Kindergarten Cohort (ECLS-K) focuses on
	children's early school experiences beginning with kindergarten. It is a multi-source, multi-
	method study that includes interviews with parents; the collection of data from principals,
	teachers, and student records abstracts; and direct child assessments.
MAIN TOPICS COVERED	The ECLS-K provides descriptive data on children's status at school entry, their transition
	into school, and their progress through fifth grade. It also provides a rich data set that
	enables researchers to analyze how a wide range of family, school, community, and
	individual variables affect children's early success in school; explore school readiness and
	the relationship between the kindergarten experience and later elementary school
	performance; and record children's cognitive and academic growth as they move through
OTABE DATE	elementary school.
START DATE	1998/99

DATA COLLECTION DATES	1998/99 (kindergarten), 1999/2000 (first grade), 2001/02 (third grade), and 2003/04 (fifth
	grade)
REGIONS COVERED	United States
UNITS STUDIED	Children, teachers, and schools
METHODS OF DATA	The ECLS-K data collection instruments are similar in content and form in all five waves of
COLLECTION	the study. Computer-assisted personal interviewing (CAPI) was the mode of data collection
	for the child assessments; telephone and in-person computer-assisted interviewing (CAI)
	was the mode of data collection for the parent interview; and self-administered
	questionnaires were used to gather information from teachers, school administrators, and
	student records. Field staff completed the facilities checklist.
SAMPLE	A multi-stage probability sample was used for ECLS-K. In the base year the primary
	sampling units (PSUs) were geographic areas consisting of counties or groups of counties.
	The second stage units were schools within sampled PSUs. At the final stage of sampling,
	students from kindergarten classes and 5-year-olds from un-graded schools were selected.
	In order to manage costs, various sub-sampling has taken place over the life of the survey.
SAMPLING FRAME	The point of departure for the ECLS-K area sample frame development was an existing
	multi-purpose frame of PSUs created using 1990 county-level population data and 1988 per
	capita income data from the U.S. Department of Commerce, Bureau of Economic Analysis.
	In the second stage of sampling, public and private schools offering kindergarten programs
	were selected. For each ECLS-K PSU, a frame of public and private schools offering
	kindergarten programs was constructed using existing school universe files: the 1995-96
	Common Core of Data (CCD) and the 1995-96 Private School Universe Survey (PSS). The
	school frame was freshened in the spring of 1998 to include newly opened schools that
	were not included in the CCD and PSS and schools that were in the CCD and PSS, but did
	not offer kindergarten according to those sources. A school sample supplement was
	selected from the supplemental frame.
INITIAL SAMPLE SIZE	21,260 individuals
ATTRITION / LATER SAMPLE	In 2003/04, there were 11,346 child completes. However, it is not possible to compute a
SIZES	meaningful attrition rate due to the various sub-sampling schemes applied to the original
	cohort.
SOURCES OF FUNDING	National Center for Education Statistics (NCES)
MAIN PUBLICATIONS OF STUDY	A list of publications related to the study can be found here:
	http://nces.ed.gov/pubsearch/getpubcats.asp?sid=024
DATA ACCESS	The Base Year (kindergarten year), First Grade, Longitudinal Kindergarten - First Grade,
	Third Grade, and Kindergarten through Third Grade data files are available for public use.
	Due to NCES' confidentiality legislation, researchers will need to obtain (or amend) a
	restricted data license to access restricted data from ECLS.

Health and Retirement Survey (HRS) and Asset and Health Dynamics of the Oldest Old (AHEAD)

SUMMARY OF STUDY	The Health and Retirement Survey (HRS) and	Asset and Health Dynamics of the Oldest Old
	(AHEAD) are major multi-round panel surveys	of representative samples of Americans born
	between 1931 and 1941 (HRS) and before 19	24 (AHEAD), which investigate in detail the
	health, income and assets, and labour force b	ehaviour of respondents and their spouses.
MAIN TOPICS COVERED	The HRS collects data relevant to the analysis	
	intergenerational transfers, health and other is	
	retirement, while AHEAD addresses issues in	
	decumulation, changes in health, and help fro	m family members during the post-retirement
	years.	
START DATE	The HRS began in 1992, surveying persons a	
	The AHEAD survey began in 1993, interviewing	ng respondents aged 70 years and older and
	their spouses.	
DATA COLLECTION DATES	HRS: Every two years from 1992 – 2004.	
	AHEAD: 1993, 1995, then every two years fro	
	The HRS and AHEAD studies were merged, v	vith a single interview schedule in 1998.

UNITS STUDIED METHODS OF DATA COLLECTION SAMPLE	United States Individuals Baseline interviews were face-to-face in the home. Follow-ups were conducted by telephone every second year, with proxy interviews after death. The HRS sample is selected under a multi-stage area probability sample design. The original HRS sample consists of individuals born between 1931 and 1941, inclusive. At the baseline data collection for the HRS sample in 1992, a total of 15,497 individuals were
METHODS OF DATA COLLECTION SAMPLE	Baseline interviews were face-to-face in the home. Follow-ups were conducted by telephone every second year, with proxy interviews after death. The HRS sample is selected under a multi-stage area probability sample design. The original HRS sample consists of individuals born between 1931 and 1941, inclusive. At the baseline data collection for the HRS sample in 1992, a total of 15,497 individuals were

	original HRS sample consists of individuals born between 1931 and 1941, inclusive. At the baseline data collection for the HRS sample in 1992, a total of 15,497 individuals were
	eligible for interviews. This total included persons identified in the household screening, plus their spouses or partners regardless of year of birth. The second sample was generated for what began as a separate study: AHEAD. This sample consists of individuals born in 1923 or before. Those born between 1914 and 1923, and about half of those born in 1913 or before, were identified through the 1992 HRS household screening operation. The other half of those born in 1913 or before were identified using the Medicare enrolment files maintained by the Health Care Financing Administration (HCFA, since renamed the Centers for Medicare, Medicaid Services, or CMS).
SAMPLING FRAME	The HRS sample and part of the AHEAD sample were generated using a multi-stage, clustered area probability frame. The other part of the dual frame for AHEAD consisted of a list of Medicare enrolees whose listed addresses were linked to a primary stage unit of the area probability sample design.
	The initial sample size for HRS is 12,654 individuals in 7,704 households. The initial sample size for AHEAD is 8,222 individuals in 6,046 households.
SIZES	Over two-thirds (68.9%) of the HRS sample have complete interview histories from their initial entry through 2004 or, for those who died prior to 2004, through an exit interview. The remaining 31.1% have missed at least one interview: an average of 3.0 interviews. More than four out of five (82.1%) of the AHEAD sample have been interviewed (self or proxy, core or exit) at every wave they were eligible. The remaining (17.9%) missed an average of 2.5 waves.

	Fax: (613) 951-3012
	Email: dynamics@statcan.ca
SUMMARY OF STUDY	The Survey of Labour and Income Dynamics (SLID) is a rotating household panel survey. At
	the heart of its objectives is the understanding of the economic well-being of Canadians:
	what economic shifts do individuals and families live through, and how does it vary with
	changes in their paid work, family make-up, receipt of government transfers or other
MAIN TORIOG GOVERED	factors?
MAIN TOPICS COVERED	SLID measures a whole range of transitions, durations, and repeat occurrences
	(longitudinal) of people's financial and work situations, to include income, labour, personal
	finance, and household finance. Since their family situation, education, and demographic
	background may play a role, the survey has extensive information on these topics as well.
START DATE	1993
DATA COLLECTION DATES	For each sampled household in SLID, up to 12 interviews are conducted over a six-year
DECICIO CONTRACTOR DE CONTRACT	period.
REGIONS COVERED	Canada
UNITS STUDIED	Individuals and families
METHODS OF DATA	Computer-assisted telephone interviews (CATI)
COLLECTION	
SAMPLE	This is a sample survey with a cross-sectional design and a longitudinal follow-up.
	The samples for SLID are selected from the monthly Labour Force Survey (LFS) and thus
	share the latter's sample design. The LFS sample is drawn from an area frame and is based
	on a stratified, multi-stage design that uses probability sampling. The sample is composed
	of six independent samples. These samples are called rotation groups because each month
	one sixth of the sample (or one rotation group) is replaced.
	The SLID sample is composed of two panels. Each panel consists of two LFS rotation
	groups and includes roughly 15,000 households. A panel is surveyed for a period of six
	consecutive years. A new panel is introduced every three years. Thus two panels are
SAMPLING FRAME	always overlapping. The samples for SLID are selected from the monthly Labour Force Survey (LFS) and thus
SAMPLING FRAME	
	share the latter's sample design. The LFS sample is drawn from an area frame and is based on a stratified, multi-stage design that uses probability sampling.
INITIAL SAMPLE SIZE	The SLID sample is composed of two panels. The size of each six-year panel is
INTIAL GAWIFEL SIZE	approximately 15,000 households. This includes about 40,000 persons, of which 31,000 are
	aged 16 years and over.
ATTRITION / LATER SAMPLE	In 1997, 83.2% of those originally selected in panel one responded to the survey (after five
SIZES	years in sample) and 87.4% of panel two responded (after two years in sample).
SOURCES OF FUNDING	Statistics Canada receives ongoing funding from the federal government to conduct the
COUNTRY OF THE PROPERTY OF THE	survey.
MAIN PUBLICATIONS OF STUDY	A working paper series (including print versions of questionnaires) is available at:
	http://www.statcan.ca/cgi-bin/downpub/listpub.cgi?catno=75F0002MIE
	Research projects from the Survey of Labour and Income Dynamics (SLID) are listed at:
	http://www.statcan.ca/english/rdc/rdcprojectsslid.htm
DATA ACCESS	Remote access: Computer programs are written by clients and sent electronically to
	Statistics Canada, where staff run the program(s) against the data base and apply
	confidentiality protection measures. If need be, data are suppressed from the output. Survey
	officers subsequently return results to clients. This is likely the most appropriate type of
	access for international researchers.
	On-premises access: Under contract with Statistics Canada, researchers are given access
	to the data in one of the Statistics Canada offices across the country, where staff provide
	access to the data and implement confidentiality procedures.
	Research data centres: Available in selected universities across Canada, these centres are
	a combination of a secure Statistics Canada office on a university campus and a statistical
	analysis computer laboratory. Researchers must become deemed employees of Statistics
	Canada and produce a research paper that follow the Statistics Canada's mandate. Thus, to
	Canada and produce a research paper that follow the otalistics danada s mandate. Thus, to

be granted access to the centres, a researcher must submit a research project proposal,
undergo a security evaluation, and take an oath to protect confidentiality. The proposed
project will become the contracted project between the researcher and Statistics Canada.

Longitudinal Survey of Immigrants to Canada (LSIC)

Longitudinal Survey of Immi	grants to Canada (LSIC)

	Email: ssd@statcan.ca
SUMMARY OF STUDY	As part of adapting to life in Canada, many immigrants face challenges such as finding
	suitable accommodation, learning or becoming more fluent in one or both of Canada's
	official languages, participating in the labour market or accessing education and training
	opportunities. The results of this survey will provide indicators of how immigrants are
	meeting these and other challenges. While integration may take many years, the
	Longitudinal Survey of Immigrants to Canada (LSIC) is designed to examine the first four
	years of settlement, a time when newcomers establish economic, social, and cultural ties to
	Canadian society. To this end, the objectives of the survey are two-fold: to study how new
	immigrants adjust to life in Canada over time; and, to provide information on the factors that
	can facilitate or hinder this adjustment.
MAIN TOPICS COVERED	Topics covered in the survey include language proficiency, housing, education, foreign
	credential recognition, employment, health, values and attitudes, the development and use
	of social networks, income, and perceptions of settlement in Canada.
START DATE	Six months after arrival from abroad in Canada between October 2000 and September 2001
DATA COLLECTION DATES	Six months after arrival, two years after arrival and four years after arrival
REGIONS COVERED	Canada
UNITS STUDIED	Individuals
METHODS OF DATA	Computer-assisted interviewing (CAI) via telephone.
COLLECTION	
SAMPLE	To adequately represent the different immigration patterns in Canada over a one-year
	period, the sample is made up 12 independent monthly cohorts selected over a period of 12
	consecutive months. The reference period therefore refers to immigrants landing in the 12
	months between October 2000 and September 2001, cohort 1 referring to those who landed
	in October 2000, cohort 2 referring to those who landed in November 2000, and so on. The
	sample is created using a two-stage stratified sampling method. The first stage involves the
	selection of immigrating units (IU) using a probability proportional to size (PPS) method. The
	second stage involves the selection of one IU member within each selected IU.
SAMPLING FRAME	The sampling frame for the LSIC is an administrative database of all landed immigrants to
	Canada that comes from Citizenship and Immigration Canada. The database, known as the
	FOSS (Field Operation Support System), includes various characteristics of each immigrant
	that can be used for survey design purposes, such as: name, age, sex, mother tongue,
	that can be used for survey design purposes, such as: name, age, sex, mother tongue, country of origin, knowledge of English and/or French, class of immigrant, date of landing,
	that can be used for survey design purposes, such as: name, age, sex, mother tongue, country of origin, knowledge of English and/or French, class of immigrant, date of landing, and intended province of destination in Canada.

	Futures", and involves numerous departments, namely Health, Justice, Solicitor General, Heritage, Human Resources Development and the RCMP. There are over 30 programs under CDI. HRDC receives approximately 2% of all CDI funding.
MAIN PUBLICATIONS OF STUDY	Information from the fifth cycle NLSCY: Education component was released on December 19, 2003 in The Daily (Statistics Canada's official release vehicle) while information from NLSCY: Challenges of late adolescence, 2000/01 was released in The Daily of June 16, 2003. Publications from the survey have included topics such as alcohol and drug use in early adolescence, childhood aggression and exposure to violence in the home, participation in activities, and childhood obesity.
DATA ACCESS	There will be no public use microdata files released after Cycle 3 (1998) of the National Longitudinal Survey of Children and Youth. Subsequent releases of these data will be through Statistics Canada's Research Data Centres only.

APPENDIX 3

GOVERNMENT FUNDED LONGITUDINAL SURVEYS AS OF JANUARY 2006*

A – ONGOING STUDIES

The ONS Longitudinal Study (ONS LS)
Scottish Longitudinal Study (SLS)
Youth Cohort Study (YCS)
Longitudinal Study of Young People in England
Effective Provision of Pre-School Education project (EPPE)(1999-2003 & 2003-08)- [new entry]
Citizenship Education Longitudinal Study (CELS) [new entry]
Offending, Crime and Justice Survey (Longitudinal self-reported study of offending) (OCJS)
Families and Children Study (FACS)
Millennium Cohort Study (MCS)
English Longitudinal Study of Ageing (ELSA)
Growing up in Scotland (GUS) [new entry]

General Household Survey (Longitudinal) (GHS (L))
*only summaries for studies <u>not</u> included in Appendix 2 are given below.

B - STUDIES IN DEVELOPMENT

Correctional Services Cohort Studies programme
Longitudinal Study of Disability – feasibility study
Wealth and Assets Survey (known as Household Asset Survey in the field) (WAS)
Longitudinal Survey of Ethnic Minorities (LSEM)
Longitudinal Survey of Refugees (LSR)

A: ONGOING STUDIES

1. EPPE (1997-2003 & 2003-2008) - Effective Provision of Pre-School Education Project

Background: The EPPE project is a large scale, longitudinal study (about 2500 children) designed to explore the impact of early education for three and four year old children on later attainment / developmental outcomes throughout primary school (up to the National Assessment at age 11 – end of Key Stage 2). The study also investigates the influences of primary education, child and family characteristics, peer / neighbourhood factors and out of school learning activities on children's development. The study is carried out in England and six main types of early education provision were used in its design. EPPE is carried out by a consortium of universities led by the Institute of Education, University of London. The study provides crucial information to inform the Ten Year Childcare Strategy in DfES.

Topics: Developmental progress of children (cognitive, social and emotional), children from disadvantaged groups or with English as second language, parental labour market histories, early education, primary education.

Latest developments: EPPE 3-11 follows the same cohort of children to the end of Key Stage 2. The project started in April 2003 and the final report will be published in late 2008.

Funders: DfES

Contact details: Rebecca Goldman (Rebecca.Goldman@dfes.gsi.gov.uk)

2. CELS - Citizenship Education Longitudinal Study

Background: DfES has commissioned the National Foundation for Educational Research to undertake a new longitudinal study of citizenship education in schools over a period of eight years. There are four component parts in the study: four cross-sectional surveys of students, schools and teachers, a longitudinal tracking survey of a student cohort, twenty longitudinal school case studies and an ongoing literature review. The aim is to assess and evaluate the effectiveness of the recently introduced (September 2002) 'Citizenship Education' course in schools and how it is reflected in pupils' knowledge, attitudes and beliefs.

Topics: Students experiences of citizenship, schools and communities (local and wider), awareness of current affairs, media, politics, neighbourhood, civic participation, volunteering, school ethos and democracy, social activity.

Latest developments: The results from the first cross-sectional survey (2001-02) have been published; the report from the first longitudinal survey of a student cohort has also been published. In 2005 the following reports were published: Citizenship Education Longitudinal Study - Second Literature Review, Citizenship Education: The Political Science Perspective and Citizenship Education Longitudinal Study: Second Cross-Sectional Survey 2004. Listening to Young People: Citizenship Education in England. The 2005 annual survey is expected to be published later this year.

Funders: DfES

Contact details: Sarah Taylor (Project Manager) Sarah. Taylor@dfes.gsi.gov.uk or 020 7925

6027

OCJS – Offending, Crime & Justice Survey (Longitudinal self-reported study of offending)

Background: There are various sources of data on offending by specific groups within the population but as there was no measure of the prevalence of offending in the general household population as a whole, the Home Office commissioned a survey to fill this gap. The survey also gathers evidence to support the targeting of resources for reducing levels of crime and illegal drug use. The 2003 sweep covered around 12,000 people aged from 10 to 65 living in private households in England and Wales. Subsequent annual sweeps between 2004 and 2006 focus on young people aged from 10 to 25, interviewing young people previously interviewed who agreed to further contact, plus new 'fresh sample' respondents aged from 10 to 25, added to ensure the total sample is around 5,000 young people each year.

Topics: Socio-demographic background information, neighbourhood characteristics, attitudes towards crime and the criminal justice system, victimisation, anti-social behaviour, fraud and technology crime, offending ever and in the last year, nature of offending, drinking behaviour and drug use, health, lifestyle and risk factors.

Latest developments: The dataset for 2003 has been sent to the UK data archive. Recently published reports include *Home Office Statistical Bulletin 20/05 - Young people and crime: findings from the 2004 Offending, Crime and Justice Survey,* and *Online Report 33/05 - Minority ethnic groups and crime: findings from the Crime and Justice Survey.* These reports (and earlier ones) are available from http://www.homeoffice.gov.uk/rds/offending survey.html. Preparations are underway for the 2004 data release for the UK data archive, reports on young people and gangs (using OCJS 2004 data) and also the 2005 OCJS main report on young people and crime. The 2005 dataset is currently being quality checked.

Funders: Home Office

Contact details: David Matz (David.Matz@homeoffice.gsi.gov.uk)

4. GHS (L) - General Household Survey (Longitudinal)

Backround: The GHS is now a longitudinal survey with a four year panel rotation. Since April 2005 it has included additional questions on income and poverty in order to accommodate the requirements of the EU regulation on income and living conditions (EU-SILC). In the past, EU requirements were met through the ECHP (European Community Household Panel Survey) with BHPS providing the UK contribution. The questionnaire and the sample design of GHS have been modified accordingly. The annual achieved sample will be 10,200 households, with two-year overlap samples of 7,000.

Topics: Household characteristics; accommodation; consumer durables; tenure; housing costs; migration, citizenship, national identity, ethnicity; employment; pensions; education; adult and child health; childcare; smoking; drinking; family information; financial situation; and income.

Latest developments: The 2005 GHS(L) went into the field in April 2005 and ended in December 2005. From January 2006 the GHS(L) survey falls into a calendar year and will begin to reinterview named individuals from a panel of around three-quarters of the households sampled in 2005, after an interval of approximately one year. A quarter of the sample is replaced each year. A 'keep in touch exercise' has been developed. Approximately three months before a face-to-face interviewer returns, Telephone Unit interviewers check that the contact information for the GHS(L) panel members is up-to-date.

The content of the 2006 questionnaire will be similar to that of the previous year, with the EU-SILC trailer on social mobility being replaced with one on social and cultural participation.

Funders: ONS, DH, DWP, HMRC; additional costs: ONS, EUROSTAT.

Contact details: (for EU-SILC enquiries: <u>Francis.Jones@ons.gsi.gov.uk</u>, for GHS enquiries: Leicha.Rickards@ons.gsi.gov.uk)

B: STUDIES IN DEVELOPMENT

5. Correctional Services Cohort Studies programme

Background: The four cohort studies in this research programme, which is being developed by the Home Office in England and Wales, reflect the need to adopt a broader multi-modal approach that goes beyond individual interventions when evaluating programmes for the resettlement of offenders. The studies aim to track large and representative samples of offenders on custodial and community sentences. They comprise "Surveying Prisoner Crime Reduction" (SPCR), "Investigating Targeting, Tailoring & Sequencing of Interventions" (ITTSI), the "Juvenile Cohort Study" and the "Court Survey: a study of sentencing and its outcomes" and are strategically important to the planning, delivery and development of the Department's policies. The first three studies will collect both administrative and survey data.

Topics: Offenders' problems and needs, patterns of interventions, reconviction, sentencing decisions.

Latest developments:

 Following the successful completion of a feasibility study, the main SPCR study has now commenced. The aim is to assess the extent and range of prisoners' problems and needs, how these are addressed during and after custody and to measure the association between participation in interventions and outcomes (including reoffending). First results from the reception wave of interviews (obtained when an offender enters prison) are expected in late 2006.

- The feasibility study for ITTSI reported in November 2005 and the main study is expected to be contracted out in spring 2006.
- The Juvenile Cohort Feasibility Study began in August. Piloting of fieldwork methods and collection of administrative data held locally by youth offending teams, youth inclusion programmes and youth inclusion and support panels will start shortly. The final technical report is due at the end of March 2006.
- The contract for the Court Survey (which consists of two parts) has been awarded to Cambridge University. Part 1 will cover sentencing decision-making and Part 2 will follow cases through to sentence completion and will include a reconviction and cost-effectiveness study. The final technical report is expected at the end of March 2006.

Funders: Home Office

Contact details: Duncan Stewart (Duncan.Stewart@homeoffice.gsi.gov.uk)

6. Longitudinal Study of Disability - feasibility study

Background: There has long been interest in developing a new dedicated survey in the area of disability and it has been acknowledged that some of the key information needs in disability will require longitudinal data. It is likely that at least part of the solution to meeting these needs will be the development of a new longitudinal survey and/or use and improvement of existing longitudinal surveys.

Topics: Ideally the survey will try to track experiences of disability in the general population over lifetimes. This would include understanding the experience of different groups within the general population (e.g. by age, ethnicity, gender, region and socio economic status); understand how disability interacts with a range of key variables including education, employment and incapacity, income, benefits and expenditure, access and use of services, social participation/capital and attitudes; and explore the dynamics of disability.

Latest developments: The feasibility report was published in September 2005 (http://www.dwp.gov.uk/asd/asd5/rrs2005.asp#meeting). The main conclusion was that there is a need for a new prevalence survey of disability. Two options for the mainstage survey are presented: a new large-scale population survey (with an achieved sample of *at least* 50,000) or piggy-backing onto an existing large-scale survey. The first option is considered the most suitable. The department is expecting to consult with other government departments on data requirements and determine funding structure early in the new year.

Funders: DWP previously lead this work, however any future work will need to be cross-departmental and is being lead by the new Office for Disability Issues (ODI) - http://www.officefordisability.gov.uk/

Contact details: Fraser Macleod (Fraser.Macleod@dwp.gsi.gov.uk)

7. WAS - Wealth and Assets Survey – (known as Household Asset Survey in the field)

Background: The planned WAS will fill crucial data gaps, including gaps in pension's data. It will enable the identification of vulnerable groups with inadequate savings; track savings behaviour for different groups over the lifecycle of the survey; examine whether there are additional cohort and/or period effects; and explore how debt is related to wealth. All development work is undertaken by ONS. It is expected that the sample will include at least 16,000 achieved households per annum for the cross-sectional survey, equating to a total sample of 32,000 households for the first two years of the survey (i.e. 2006/07 and 2007/08).

Topics: The survey will comprise a household and individual questionnaire. The household questionnaire includes housing tenure, council tax, mortgages, equity release, and value of household goods. The individual questionnaire covers work, income, attitudes, pensions, financial assets, other debt, property, inheritance, and will also collect data on national identity, religion and ethnicity.

Latest developments: Results from the feasibility study suggest respondents accept the survey content and can provide supporting evidence on assets and liabilities. A pilot study is scheduled for January 2006. The survey will comprise: a) a cross sectional survey split over 2006/07 and 2007/08, b) a follow-up of the split cross-sectional in 2008/09 and 2009/10. ONS is liaising with HMRC, DWP, DTI and ODPM about linking survey data to administrative records. Funding is being finalized with contributing departments.

Funders: ONS, DWP, DTI, HMT, HMRC and ODPM are all currently contributing to survey development costs, with ONS and DWP being the major co-funders.

Contact details: Elaine Chamberlain (<u>Elaine.Chamberlain@ons.gsi.gov.uk</u>), Mathew Charlton (Mathew.Charlton@ons.gsi.gov.uk)

8. Longitudinal Survey of Ethnic Minorities

Background: In 2002 the NLSC commissioned a small scoping study to look at the provision of longitudinal data on ethnic minority groups. This led to more detailed work (commissioned by ESRC and ONS from Prof. James Nazroo at UCL) to establish the precise research focus and design of a possible survey in this area. Prof. Nazroo submitted his final report in June 2005, proposing an achieved wave 1 sample of 10,000 respondents from non-white ethnic minority groups and 2,000 white majority respondents. The survey would have a probability-based sample design with over-sampling in geographical areas with high expected strike rates from screening and the exclusion of areas with very low strike rates. Collection of data would be annual in the first instance.

Topics: Prof Nazroo has recommended a general purpose survey that will look at life patterns and transitions in areas such as health, family dynamics, income and wealth, education, social networks, housing, crime and criminal justice, and the labour market.

Latest developments: A consultative meeting was held in May 2005 and the ESRC Research Resources Board considered a request for funding in June. ONS has written to other government departments in order to find out whether they would be willing to contribute funding and to seek their views on a range of options for boosting the sample, some of which would allow for separate analysis of ethnic groups not covered in the current proposals. No funding has yet been committed, but a number of departments have expressed in-principle support for the survey and the remainder are being chased for a response.

Potential funders: ESRC and possibly a consortium of government funders

9. LSR - Longitudinal Survey of Refugees

Background: The proposed Longitudinal Survey of Refugees (LSR) is a cross-departmentally funded, Home Office led, project to examine the integration experiences of refugees arriving in the UK. It has replaced an earlier proposal for Longitudinal Survey of Refugees and Other Migrants, reflecting the decision to concentrate the scope of the survey on refugees and other asylum applicants who receive leave to remain. This would yield a sample of approximately 9,000 eligible interviewees over a 24 month period. The LSR is expected to provide valuable new information in two areas: 1) the provision of data to monitor outcomes and/or indicators of integration, and 2) data to describe the process of integration.

Topics: Employment, housing, education, health, social networks, language and cultural knowledge, rights and citizenship, migration history, income and expenditure etc

Latest developments: Expressions of interest to conduct the survey were invited in November 2005. Invitations to tender were issued before Christmas and it is hoped to have a contractor in place by March/April 2006. Piloting of wave 1 is scheduled to begin in January 2007.
