

# Oxford Flood Alleviation Scheme

Reducing flood risk to homes, businesses and vital infrastructure.

Providing a sustainable long-term solution to manage flooding.

Providing a true green legacy to connect people and the environment.

Our scheme will lower an area of the floodplain to create more space for water to move through fields rather than built up areas. This will create a wetland corridor and provide opportunities for people and wildlife.

- Our maintenance track will form a new permissive path for cycling and walking. New bridges will keep existing paths open.
- New rich wetland habitat will have an extensive network of freshwater features.
- Our scheme will be managed by an environmental organisation to benefit wildlife and local people.
